

Dan-Jet PC

Dan-Jet PC

Pressure compensating microjet for undertree, vineyard and landscape irrigation

- Low maintenance static ray-jet
- Pressure compensating - constant flow rate over wide pressure range
- Diverse distribution patterns and wetted diameters
- High clogging resistance

Features

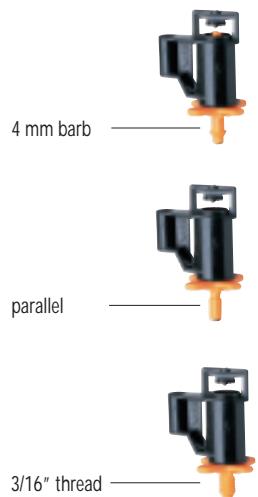

- Flow range : 19 - 76 l/h. Each nozzle has a constant flow rate over wide pressure range, to ensure high irrigation uniformity at any topographical conditions, long laterals and small pipe diameters.
- Pressure compensation range: 1.0 - 3.0 bar
- The floating regulation membrane allows spacious water pathways even at lowest flow rates, which makes the DanJet highly clogging resistant.
- Large number of spreader and nozzle combinations provides selection of flows and distribution patterns.

Filtration requirements

Black, orange and blue nozzles: 130 microns (120 mesh)

Violet, green and red nozzles: 200 microns (80 mesh)
