

New Product Data

Date: 17/1/06

Product name: PCJ-HF 40 l/h. & PCJ-HF-CNL 20 & 25 l/h.

Picture:

Description:

New products are joining the new product family recently introduced into the market:

PCJ HF 40l/h

PCJ HF CNL, flow rates 20 and 25l/h

Application:

As a bubbler: in the landscaping market and for very large tree-orchards and/or large water requirements.

As a flow regulator: with our sprayers and/ or for converting an orchard irrigated with simple sprayers to PC sprayers, thus enabling us to penetrate into customers/ market segments dominated by our competitors, and hopefully take over in due time.

Specification & recommendations:

The entire PCJ HF family is identified by the basic color: orange.

Each of the flow rates is identified by a different upper color: 40l/h = blue.

20 l/h CNL upper color : black

25 l/h. CNL upper color : gray

Each flow rate is available with the standard 3 outlets: nipple, 3m-barb, 4mm-barb.

PCJ HF used as a bubbler must be supplied to the field with a cap mounted on the outlet (to prevent splashing). It will therefore appear mounted with a cap in all marketing materials.

PCJ HF used as pressure regulator will be supplied without caps.

PCJ HF CNL - Circles around the product's inlet connector will identify the product (as done with the PCJ drippers).

Marketing tools:

Technical data sheet is in preparation. The sheet includes only the bubbler configuration with the cap.

Logistic data:

Identifying colors:

Base: Orange

Upper part: 40l/h: Blue

Availability:

Available in stock

Sap Catalog numbers:

PCJ HF 40 l/h. With assembly cup : 21620-002200
