Reed Switch Connection, Sealing and Removal

Connecting the reed switch - push back the bayonet connector as shown below:

Insert the reed switch into the register:

Rotate the reed switch to the point where it goes further into the register:

Push down the bayonet and rotate it clockwise to lock the reed switch:

Sealing the reed switch – select a reed switch seal:

Insert the seal as shown below:

Push the seal down till it snaps in and locks:

The reed switch is now sealed:

Removing the reed switch – use a cutter to cut the connecting bridge between the peg and the latch:

Remove the peg:

Rotate the bayonet counterclockwise and pull out the reed switch:

Remove the latch:
