## Impact Sprinklers

**1/2", 3/4", 1" & 1 1/4" Brass and Plastic, Full and Part Circle**

## Impact Sprinklers

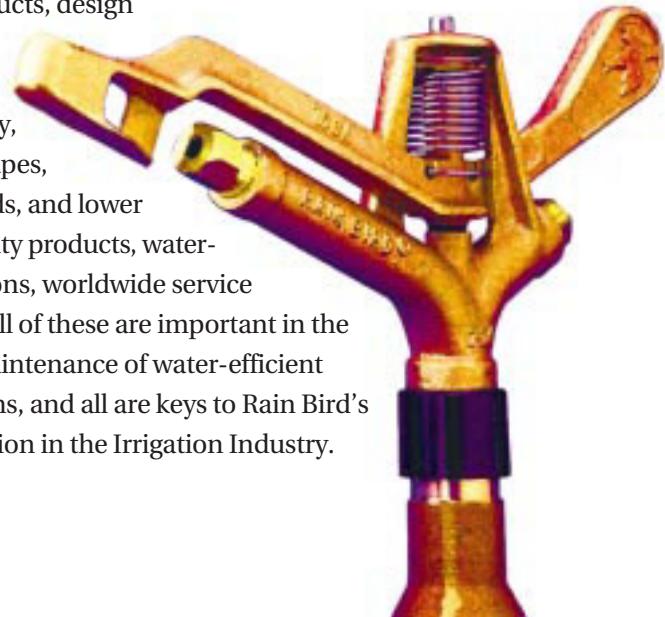

**I**t all began with U.S. Patent number 1,997,901, awarded on December 18, 1933, to citrus farmer Orton Englehart for a novel watering device described as a "spring-activated horizontal impact arm driven sprinkler." This new type of sprinkler was durable and distributed water farther, more evenly and much more efficiently than the existing sprinklers of the day. Englehart's neighbors Clement and Mary La Fetra were so taken with the invention that in 1935 they arranged to manufacture the devices in their barn. Thus, Rain Bird Sprinkler Manufacturing Corporation was born.

Since its founding over 60 years ago, Rain Bird has grown into the largest manufacturer of irrigation systems in the world serving more than 120 countries worldwide. Today, Rain Bird holds over 130 patents for all types of irrigation equipment,

many of which are dedicated to the improvement of the original impact sprinkler.

At every step, Rain Bird focuses on the most efficient possible use of the planet's most valuable resource—water. This concern shows in Rain Bird's innovative products, design aids, training seminars, and most importantly, in green landscapes, higher crop yields, and lower water bills. Quality products, water-saving innovations, worldwide service and support—all of these are important in the creation and maintenance of water-efficient irrigation systems, and all are keys to Rain Bird's leadership position in the Irrigation Industry.

## The Impact Sprinkler

**The Impact Arm** is the most important part of the sprinkler. A properly balanced and positioned arm is necessary to maintain smooth rotation. The arm includes a rear counterweight, a spoon and a vane. The spoon directs water from the nozzle at a 90 degree angle which forces the arm away from the impact bridge. The arm spring absorbs this energy, and returns the arm to its original position. As the arm returns, the vane intersects the water stream from the nozzle and increases the return speed. The arm impacts the bridge of the sprinkler causing the body to rotate.

**The Fulcrum Pin** allows the arm to pivot freely.

**The Arm Spring** keeps the sprinkler from rotating in reverse by absorbing excess energy and returning the arm to the impact bridge.

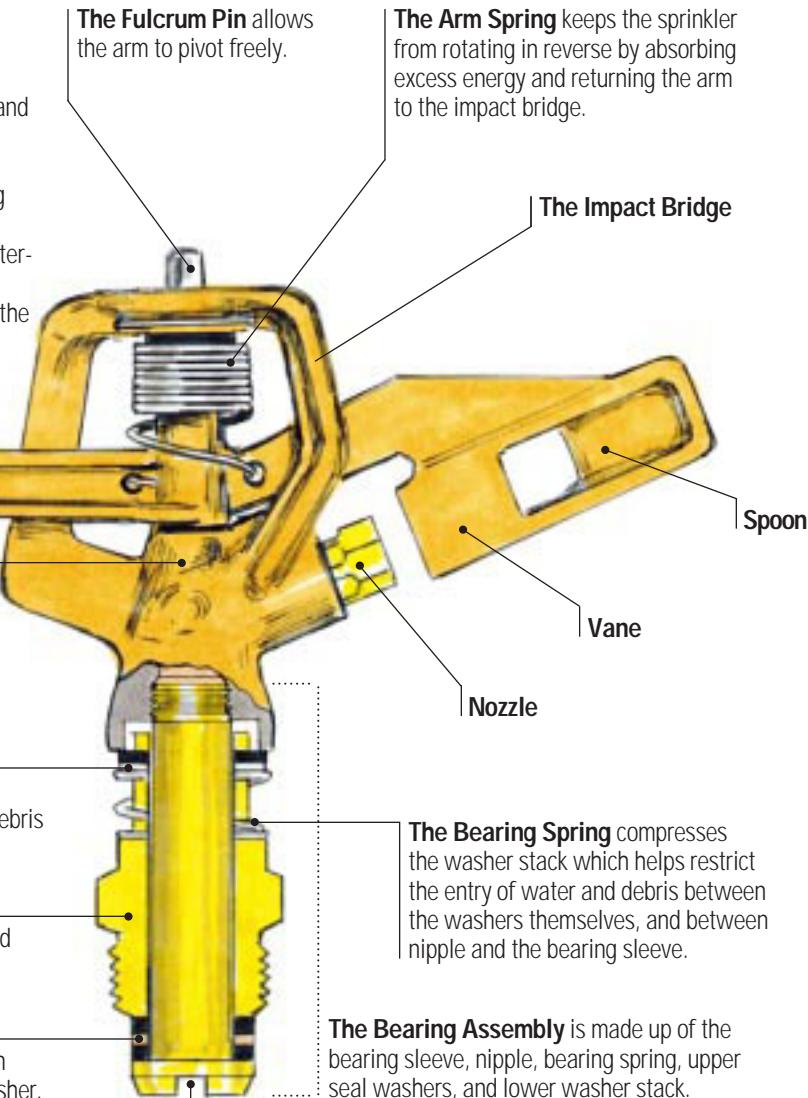

**The Impact Bridge**

**The Body** includes the bearing hood which helps keep debris out of the bearing, and the impact bridge which is the contact point for the impact arm. (arrow to impact bridge)

**The Upper Seal Washers** keep a water tight seal at the top of the bearing, and help to keep debris from entering the bearing from the top.

**The Bearing Sleeve** keeps the sprinkler secured to the riser while allowing it to rotate.

**The Washer Stack** is made up of 3 washers, an upper and a lower seal washer and the wear washer. The middle wear washer provides the surface on which the sprinkler rotates. This surface is water lubricated. Different materials are used for the wear washer in order to speed up or slow down rotation.

**The Bearing Spring** compresses the washer stack which helps restrict the entry of water and debris between the washers themselves, and between nipple and the bearing sleeve.

**The Bearing Assembly** is made up of the bearing sleeve, nipple, bearing spring, upper seal washers, and lower washer stack.

**The Bearing Nipple** keeps the bearing assembly secured to the body of the sprinkler.

## Features and Benefits

### Key features of Rain Bird Impact Sprinklers

- Heavy duty plastic, brass, stainless steel, and aluminum components
- Die-cast brass arms on all 1/2" brass sprinklers
- Patented, self-flushing wedge and "precision jet" (PJ) drives
- Chemically resistant washers
- Wide variety of nozzles available
- Two year warranty on all sprinklers

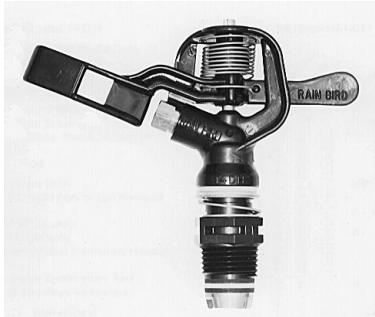

### Benefits to Growers

- Long life and low maintenance
- Stronger and more consistent components
- Wear resistance and conservation of water
- Worry free chemical and fertilizer application
- Design flexibility and retro-fitability
- Peace of mind knowing that Rain Bird is committed to producing quality products and standing behind them.

Please Note: The following performance charts are based upon actual test data gathered under "zero wind" conditions. Field performance may vary due to wind, manufacturing variations, hydraulic conditions, or other factors. Unless otherwise noted, all diameters are based upon a 30 inch riser height. Distribution uniformity varies with sprinkler spacing and field conditions. Consult your local Rain Bird dealer or Rain Bird regarding recommended spacings for specific sprinkler, nozzle, and pressure combinations.

## 14DH

### 1/2" Full Circle, Plastic Impact Sprinkler

**Bearing:** 1/2" Male NPT, Plastic

**Trajectory Angle:** 22°

**Operating Range:** 20-60 psi

**Flow Rate:** .79-2.68 GPM

**Radius:** 23-38 ft.

#### FEATURES

- Durable Delrin™ plastic body, arm and bearing sleeve
- Stainless steel springs and fulcrum pin
- Brass bearing nipple
- Chemically resistant washers
- Teflon™ wear washer
- Two-year warranty

#### BENEFITS

- Superior chemical and grit resistance
- Smooth rotation at lower pressures
- Design flexibility
- Built to last

## SLL20VH

### 1/2" Full Circle, Stainless Steel Impact Sprinkler

Bearing: 1/2" Male NPT, Plastic

Trajectory Angle: 7°

Operating Range: 25-50 psi

Flow Rate: .88-2.45 GPM

Radius: 19-29 ft.

#### FEATURES

- Strong Drive Arm
- Teflon™ wear washer
- One piece, tubular stainless steel body
- Stainless steel arm
- Hooded spring
- Durable plastic, quick-fit nozzles
- Two-year warranty

#### BENEFITS

- Runs on smaller nozzle sizes
- Smooth rotation at lower pressures
- Minimal internal turbulence
- Greater distance of throw
- Superior corrosion resistance
- Great protection from the elements
- Quick and easy nozzle changes

## SLL20H

### 1/2" Full Circle, Stainless Steel Impact Sprinkler

Bearing: 1/2" Male NPT, Plastic  
Trajectory Angle: 7°

Operating Range: 25-60 psi

Flow Rate: 1.73-4.43 GPM

Radius: 21-33 ft.

#### FEATURES

- Spoon Drive Arm
- One piece, tubular stainless steel body
- Stainless steel arm
- Hooded spring
- Durable plastic, quick-fit nozzles
- Two-year warranty

#### BENEFITS

- Runs on larger nozzle sizes
- Minimal internal turbulence
- Greater distance of throw
- Superior corrosion resistance
- Great protection from the elements
- Quick and easy nozzle changes

## SM20VH

### 1/2" Full Circle, Stainless Steel Impact Sprinkler

Bearing: 1/2" Male NPT, Plastic  
Trajectory Angle: 17°

Operating Range: 25-50 psi

Flow Rate: .88-2.45 GPM

Radius: 22-37 ft.

#### FEATURES

- Strong Drive Arm
- Special 50 Drill Nozzle available (Please specify A03350)
- Teflon™ wear washer for smooth rotation at lower pressures
- One piece, tubular stainless steel body
- Stainless steel arm
- Hooded spring
- Durable plastic, quick-fit nozzles
- Two-year warranty

#### BENEFITS

- Runs on smaller nozzle sizes
- Smooth rotation at lower pressures
- Minimal internal turbulence
- Greater distance of throw
- Superior corrosion resistance
- Great protection from the elements
- Quick and easy nozzle changes

## SM20H

### 1/2" Full Circle, Stainless Steel Impact Sprinkler

**Bearing:** 1/2" Male NPT, Plastic  
**Trajectory Angle:** 17°

**Operating Range:** 25-60 psi

**Flow Rate:** 1.73-4.43 GPM  
**Radius:** 26-42 ft.

#### FEATURES

- Spoon Drive Arm
- One piece, tubular stainless steel body
- Stainless steel arm
- Hooded spring
- Durable plastic, quick-fit nozzles
- Two-year warranty

#### BENEFITS

- Runs on larger nozzle sizes
- Minimal internal turbulence
- Greater distance of throw
- Superior corrosion resistance
- Great protection from the elements
- Quick and easy nozzle changes

## S20VH

### 1/2" Full Circle, Stainless Steel Impact Sprinkler

Bearing: 1/2" Male NPT, Plastic  
Trajectory Angle: 23°

Operating Range: 25-50 psi

Flow Rate: .88-2.45 GPM

Radius: 24-38 ft.

#### FEATURES

- Strong Drive Arm
- Teflon™ wear washer
- One piece, tubular stainless steel body
- Stainless steel arm
- Hooded spring
- Durable plastic, quick-fit nozzles
- Two-year warranty

#### BENEFITS

- Runs on smaller nozzle sizes
- Smooth rotation at lower pressures
- Minimal internal turbulence
- Greater distance of throw
- Superior corrosion resistance
- Great protection from the elements
- Quick and easy nozzle changes

## L20VH

### 1/2" Full Circle, Brass, Wedge Drive Impact Sprinkler

Bearing: 1/2" Male NPT, Brass

Trajectory Angle: 10°

Operating Range: 25-80 psi

Flow Rate: .56-2.98 GPM

Radius: 22-32 ft.

#### FEATURES

- Patented, self-flushing wedge drive
- Durable brass die-cast arm
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- Two-year warranty

#### BENEFITS

- Wedge drive runs on smaller nozzles and lower pressures
- Self-flushing design reduces wear from grit
- Corrosion and grit resistant
- Built to last

## M20VH M20VH-PM

**1/2" Full Circle, Brass, Wedge Drive Impact Sprinkler**

Bearing: 1/2" Male NPT

VH Model: Brass

PM Model: Plastic

Trajectory Angle: 15°

Operating Range: 25-80 psi

Flow Rate: .56-2.55 GPM

Radius: 25-36 ft.

### FEATURES

- Patented, self-flushing wedge drive
- Durable brass die-cast arm
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- Two-year warranty

### BENEFITS

- Wedge drive runs on smaller nozzles and lower pressures
- Self-flushing design reduces wear from grit
- Corrosion and grit resistant
- Built to last

## PERFORMANCE DATA

**M20VH/M20VH-PM**

## M20H

### 1/2" Full Circle, Brass Impact Sprinkler

Bearing: 1/2" Male NPT, Brass

Trajectory Angle: 15°

Operating Range: 25-80 psi

Flow Rate: 1.73-4.22 GPM

Radius: 31-38 ft.

#### FEATURES

- Durable brass die-cast arm
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- Two-year warranty

#### BENEFITS

- Spoon drive arm runs on larger nozzles and higher pressures
- Corrosion and grit resistant
- Built to last

## 20AH

### 1/2" Full Circle, Aluminum Arm Impact Sprinkler

**Bearing:** 1/2" Male NPT, Brass

**Trajectory Angle:** 25°

**Operating Range:** 15-50 psi

**Flow Rate:** 1.55-3.22 GPM

**Radius:** 21-28 ft.

#### FEATURES

- Durable die-cast, black anodized aluminum arm
- Extra-large spoon
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- Two-year warranty

#### BENEFITS

- Aluminum arm allows for smaller nozzle sizes and lower pressures
- Large spoon accommodates a wide range of Straight Bore and Off-Axis Nozzles
- Corrosion and grit resistant
- Built to last

## PART NUMBERS AND ORDERING INFORMATION

### Ordering Example

To order a 29JH sprinkler with a 5/32" Brass Straight Bore Nozzle  
the part number would be:

MAKE YOUR SPRINKLER  
CHOICE FROM CHART 1

CHOOSE NOZZLE SIZE(S)  
FROM CHART 2

ADD THEM TOGETHER TO  
CREATE THE PART NUMBER

A06502- + 10 = A06502-10

Chart 1	PART NUMBER: FIRST HALF
<b>SPRINKLER ONLY</b>	
Sprinkler without Nozzle	A06501
<b>SPRINKLER WITH SINGLE NOZZLE INSTALLED</b>	
Sprinkler with SBN-3	A06502-

Chart 2		PART NUMBER: SECOND HALF			
NOZZLE		7/64"	1/8"	9/64"	5/32"
Brass Straight Bore Nozzle (105842-)	SBN-3	07	08	09	10

Bold nozzle size numbers denote the most common nozzle choices.

## 2045-PJ

### 1/2" Full or Part Circle, Plastic Impact Sprinkler

Bearing: 1/2" Male NPT, Plastic

Trajectory Angle: 23°

Operating Range: 25-60 psi

Flow Rate: 1.5-6.4 GPM

Radius: 22-44 ft.

#### FEATURES

- Durable Delrin™ plastic, body arm, bearing sleeve and nipple
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- Plastic Quick Fit Nozzles
- Low Angle (10°) Nozzles available
- Integral straightening vane for greater distance
- Full or Part Circle operation
- Two-year warranty

#### BENEFITS

- Superior chemical and grit resistance
- Smooth rotation at lower pressures
- Design flexibility
- Built to last

## 25BPJ-FP-ADJ 25BPJ-FP-ADJ-DA 25B-FP-ADJ

**1/2" Full or Part Circle,  
Brass Impact Sprinklers**

**Bearing:** 1/2" Male NPT, Brass

**Trajectory Angle:** 25°

**Operating Range:** 30-50 psi

**Flow Rate:** 3.1-5.0 GPM

**Radius:** 38-41 ft.

### FEATURES

- Durable brass die-cast, 'precision jet' (PJ) arm
- Standard spoon style arm also available (25B-FP-ADJ)
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- All models include integral break-up pin for adjustable distribution
- DA option also includes integral distance control flap
- Full or Part Circle operation
- Two-year warranty

### BENEFITS

- PJ arm reduces side splash
- Many options provide design and application flexibility
- Corrosion and grit resistant
- Built to last

## **25A-FP-TNT**

### **1/2" Full or Part Circle, Aluminum Arm, Impact Sprinkler**

Bearing: 1/2" Male NPT, Brass

Trajectory Angle: 25°

Operating Range: 25-70 psi

Flow Rate: 2.08-3.75 GPM

Radius: 23-39 ft.

#### **FEATURES**

- Durable die-cast, black anodized aluminum arm
- Extra-large spoon
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- TNT bearing
- Full or Part circle operation
- Two-year warranty

#### **BENEFITS**

- Aluminum arm allows for smaller nozzle sizes and lower pressures
- Large spoon accommodates a wide range of Straight Bore and Off-Axis Nozzles
- Corrosion and grit resistant
- Built to last

## 30FH

### 3/4" Full Circle, Brass Impact Sprinkler

**Bearing:** 3/4" Male NPT, Brass

**Trajectory Angle:** 27°

**Operating Range:** 25-80 psi

**Flow Rate:** 2.26-6.47 GPM

**Radius:** 39-43 ft.

#### FEATURES

- Heavy duty brass construction
- Stainless steel springs and fulcrum pin
- Chemically resistant, Teflon™ washers
- Dual nozzle ports
- Two-year warranty

#### BENEFITS

- Teflon washers allow for smaller nozzles and lower pressures
- Wide range of flow rates
- Corrosion and grit resistant
- Built to last

## 30PWH

### 3/4" Full Circle, Aluminum Arm Impact Sprinkler

**Bearing:** 3/4" Male NPT, Brass

**Trajectory Angle:** 27°

**Operating Range:** 25-80 psi

**Flow Rate:** 1.7-5.5 GPM

**Radius:** 38-46 ft.

#### FEATURES

- Durable die-cast, anodized, aluminum arm
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- Dual nozzle ports
- Two-year warranty

#### BENEFITS

- Aluminum arm allows for smaller nozzles and lower pressures
- Wide range of flow rates
- Corrosion and grit resistant
- Built to last

## 14070H

### 3/4" Full Circle, Brass Impact Sprinkler

Bearing: 3/4" Male NPT, Brass  
Trajectory Angle: 27°

Operating Range: 25-80 psi  
Flow Rate: 4.2-23 GPM  
Radius: 44-71 ft.

#### FEATURES

- Heavy duty brass construction
- Extra large body and barrel
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- Dual nozzle ports
- Two-year warranty

#### BENEFITS

- Extra large body accommodates wide range of flow rates and nozzles
- Long nozzle barrel increases distance of throw
- Corrosion and grit resistant
- Built to last

### PERFORMANCE DATA

## 30PSH

### 3/4" Full Circle, Brass Impact Sprinkler

**Bearing:** 3/4" Male NPT, Brass  
**Trajectory Angle:** 27°

**Operating Range:** 25-100 psi

**Flow Rate:** 5.89-23.4 GPM

**Radius:** 47-68 ft.

#### FEATURES

- Heavy duty brass construction
- High pressure spoon
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- Dual nozzle ports
- Two-year warranty

#### BENEFITS

- High pressure spoon allows for larger nozzles and pressures
- Exceptionally wide range of flow rates
- Corrosion and grit resistant
- Built to last

## 35A-TNT 35A-PJ

### 3/4" Full or Part Circle, Brass Impact Sprinklers

**Bearing:** 3/4" Male NPT, Brass

**Trajectory Angle:** 27°

**Operating Range:** 30-60 psi

**Flow Rate:** 3.9-7.8 GPM

**Radius:** 42-51 ft.

#### FEATURES

- "Precision jet" (PJ) arm (35A-PJ)
- Standard spoon style arm also available (35A-TNT)
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- ADJ-3 Nozzles include integral break-up pin
- DAN-3 Nozzles include break-up pin and distance flap
- Full or Part Circle operation
- Two-year warranty

#### BENEFITS

- PJ arm reduces side splash
- Many options provide design and application flexibility
- Corrosion and grit resistant
- Built to last

### PERFORMANCE DATA

35A-TNT/35A-PJ

## 70H

### 1" Full Circle, Brass Impact Sprinkler

**Bearing:** 1" Female NPT, Brass

**Trajectory Angle:** 21°

**Operating Range:** 40-80 psi

**Flow Rate:** 8.8-45.8 GPM

**Radius:** 57-82 ft.

#### FEATURES

- Heavy duty brass construction
- 1" Female NPT Bearing
- Integral Straightening Vanes
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- Dual nozzle ports
- Two-year warranty

#### BENEFITS

- Integral straightening vanes increase distance of throw
- Wide range of flow rates
- Corrosion and grit resistant
- Built to last

### PERFORMANCE DATA

## 65PJ

### 1" Full or Part Circle, Brass Impact Sprinkler

**Bearing:** 1" Female NPT, Brass

**Trajectory Angle:** 27°

**Operating Range:** 50-80 psi

**Flow Rate:** 12.9-16.5 GPM

**Radius:** 57-65 ft.

#### FEATURES

- Heavy duty brass construction
- 1" Female NPT Bearing
- "Precision jet" (PJ) arm
- Stainless steel springs and fulcrum pin
- Chemically resistant washers
- ADJ-4 Nozzles include integral break-up pin
- Full or Part Circle operation
- Two-year warranty

#### BENEFITS

- PJ arm reduces side splash
- Many options provide design and application flexibility
- Corrosion and grit resistant
- Built to last

## 80E

### 1 1/4" Full Circle, Brass Impact Sprinkler

Bearing: 1 1/4" Male NPT, Brass

Trajectory Angle: 27°

Operating Range: 25-100 psi

Flow Rate: 17.1-127.7 GPM

Radius: 61-116 ft.

#### FEATURES

- Heavy duty brass construction
- Internal plastic straightening vane
- Stainless steel springs and fulcrum pin
- Plastic bearing hood
- Chemically resistant washers
- Dual nozzle ports
- Two-year warranty

#### BENEFITS

- Internal straightening vane increases distance of throw
- Plastic bearing hood protects spring and bearing sleeve from damage
- Corrosion and grit resistant
- Built to last

## PART NUMBERS AND ORDERING INFORMATION

### Ordering Example

To order an 80E sprinkler with a 3/8" Brass Straight Bore Nozzle and an 7/32" Brass 20° Low Angle Spreader Nozzle the part number would be:

A23803- + 24-14 = A23803-24-14

Chart 1	PART NUMBER: FIRST HALF
<b>SPRINKLER ONLY</b>	
Sprinkler without Nozzle	<b>A23802</b>
<b>SPRINKLER WITH SINGLE NOZZLE INSTALLED</b>	
Sprinkler with SBN-5 and Brass Plug	<b>A23813-</b>
Sprinkler with LPN-5 and Brass Plug	<b>A23814-</b>
<b>SPRINKLER WITH COMBINATION NOZZLES INSTALLED</b>	
Sprinkler with SBN-5 and LAN-1-20	<b>A23803-</b>

NOZZLE	PART NUMBER: SECOND HALF											
	7/32"	11/32"	3/8"	13/32"	7/16"	15/32"	1/2"	17/32"	9/16"	5/8"	11/16"	
Brass Straight Bore Nozzle (103043-)	<b>SBN-5</b>	-	<b>22</b>	<b>24</b>	<b>26</b>	<b>28</b>	<b>30</b>	<b>32</b>	<b>34</b>	<b>36</b>	<b>40</b>	<b>44</b>
Brass Low Pressure Nozzle (108149-)	<b>LPN-5</b>	-	<b>22</b>	<b>24</b>	<b>26</b>	<b>28</b>	<b>30</b>	<b>32</b>	-	-	<b>40</b>	-
Brass 20° Low Angle Spreader Nozzle (100226-)	<b>LAN-1-20</b>	<b>14</b>	-	-	-	-	-	-	-	-	-	

## 85EHD

### 1 1/4" Full or Part Circle, Brass Impact Sprinklers

Bearing: 1 1/4" Male NPT, Brass

Trajectory Angle: 27°

Operating Range: 25-100 psi

Flow Rate: 17.1-127.7 GPM

Radius: 61-116 ft.

#### FEATURES

- Heavy duty brass construction
- Stainless steel wear buttons, springs and fulcrum pin
- Locking stainless steel trip collars
- Chemically resistant washers
- Full or Part Circle operation
- Two-year warranty

#### BENEFITS

- Internal straightening vane increases distance of throw
- Stainless steel buttons protect trip mechanism from wear
- Corrosion and grit resistant
- Built to last

## 85EHD-LA

### 1 1/4" Full or Part Circle, Brass Impact Sprinklers

Bearing: 1 1/4" Male NPT, Brass

Trajectory Angle: 17°

Operating Range: 20-100 psi

Flow Rate: 17.1-127.7 GPM

Radius: 48-108 ft.

#### FEATURES

- Heavy duty brass construction
- Stainless steel wear buttons, springs and fulcrum pin
- Locking stainless steel trip collars
- Chemically resistant washers
- Full or Part Circle operation
- Two-year warranty

#### BENEFITS

- Internal straightening vane increases distance of throw
- Stainless steel buttons protect trip mechanism from wear
- Corrosion and grit resistant
- Built to last

## 1/2" Impact Sprinklers

### GENERAL PERFORMANCE DATA

#### Sprinkler Throw

U.S. Units

##### GENERAL NOTE

Performance data are obtained under ideal test conditions and may be adversely affected by wind, hydraulic conditions, and other factors.

##### NOTE A

Diameters are based on a 30"/76cm riser height.

##### NOTE B

This data is not appropriate for the 20AH(ALUM). See catalog performance chart.

##### NOTE C

Some data shown will vary from catalog data. This occurs because two sprinklers with the same nozzle size can have a different diameter of throw.

### RFN-1 Performance

## 3/4" Impact Sprinklers

## GENERAL PERFORMANCE DATA

### Sprinkler Throw

U.S. Units

#### GENERAL NOTE

Performance data are obtained under ideal test conditions and may be adversely affected by wind, hydraulic conditions, and other factors.

#### NOTE A

Diameters are based on a 30"/76cm riser height.

#### NOTE B

Some data shown will vary from catalog data. This occurs because two sprinklers with the same nozzle size can have a different diameter of throw.

Because of the design of the LPN-3 nozzles, a reduced diameter of throw can be expected at 3/16"/4.76mm and above. This is because these larger sizes utilize a two-hole configuration as opposed to the one-hole design of the smaller nozzles. Flow data for the larger nozzles will still be higher (see flow tables.)

PRESSURE (PSI) @ NOZZLE	RADIUS OF THROW (FT.) FOR STRAIGHT BORE NOZZLES

50	40	41	41	41	40	41	42	44

### Sprinkler Flow

U.S. Units

#### GENERAL NOTE

When using range nozzle sizes 15/64", 1/4", 17/64", and 9/32" / 5.59mm, 6.35mm, 6.75mm, and 7.14mm with vanes, see 14070EH tables (page??) for accurate flow data.

Flow for keyhole nozzles is the same as for straight bore nozzles; throw diameters are approximately 5% less than straight bore nozzles.

## TECH SPECS

### 808A Series 1 1/4" (32mm) Impact Sprinkler

Rugged, reliable, long throwing with uniform coverage. The Rain Bird 808A series full circle 1 1/4" (32mm) impact sprinklers are engineered to last under demanding conditions in agricultural irrigation systems. The extended barrel design increases distance of throw, allowing wider spacing and more economical designs. The 21 degree trajectory provides the right balance of wind resistance and distance of throw.

The 808A sprinkler is available with or without spreader nozzle. The dual nozzle configuration provides outstanding uniformity and the single nozzle model is suited for wastewater applications. (Contact factory for SPACE data and uniformity information). Use either the 85 ESHD or low angle 85 ESHD-LA part circle sprinklers to complete the system. Ideal for specifying on wastewater sprayfield systems or any other agricultural irrigation system.

#### Applications

- Permanent set irrigation of crops such as corn, hay, sod, nurseries, tobacco, etc.
- Portable systems
- Wastewater sprayfield irrigation
- Pastures and arenas
- Dust control

#### Features

- Balanced long range drive arm provides even rotation and maximum driving force. Permits single or dual nozzle operation
- 21 degree trajectory body for long throw even in windy conditions
- Range tube extension maximizes throw distance.
- Durable anodized aluminum body, arm, and extension tube - lightweight and rugged
- Dual nozzle model has matched rear mounted spreader for each range nozzle
- Single range nozzle (spreader plugged) model for wastewater applications
- Brass bearing is the same as used on model 80 & 85 series sprinklers. Proven design & common parts

#### Models

- 808A

#### Specifications

##### Material:

Body and barrel:  
Anodized aluminum  
Arm:

Anodized aluminum  
Bearing sleeve and nipple:  
Heavy duty brass

All springs:  
Stainless steel  
All washers:  
Chemically resistant

##### Inlet threads:

1 1/4" Male NPT (32mm)

**Body trajectory:** 21 degrees

**Spreader nozzle trajectory:** 20 deg

#### How to Specify

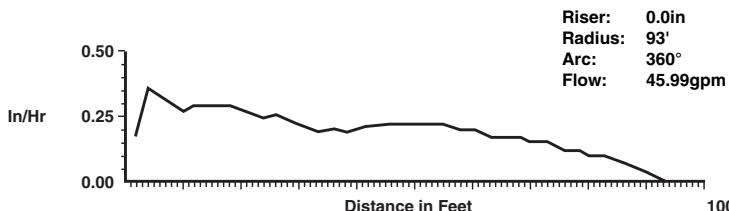

- 808A-XX-XX (dual nozzle)
- 808A-XX (single nozzle)
- 808A (less nozzles)

##### Notes

1. See performance chart for available nozzle combinations
2. BSP models available, please specify when ordering

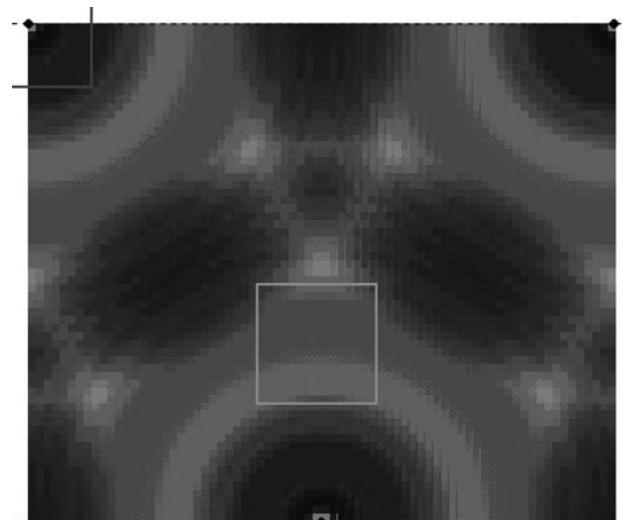

Matched range nozzle and spreader nozzle combinations provide many high uniformity combinations. Here is an example:

*Distribution test of 26 x 8 nozzles @ 80 psi (5,5 bar)*

*Spacing: 145' x 126' (44,2 x 38,4 m) equilateral*

*CU=89%, DU=85%, SC=1.1  
Precipitation rate = .25 in/hr (6,3 mm/hr)*

## Rain Flow™ Nozzles

**Looking for constant performance at changing pressures?**

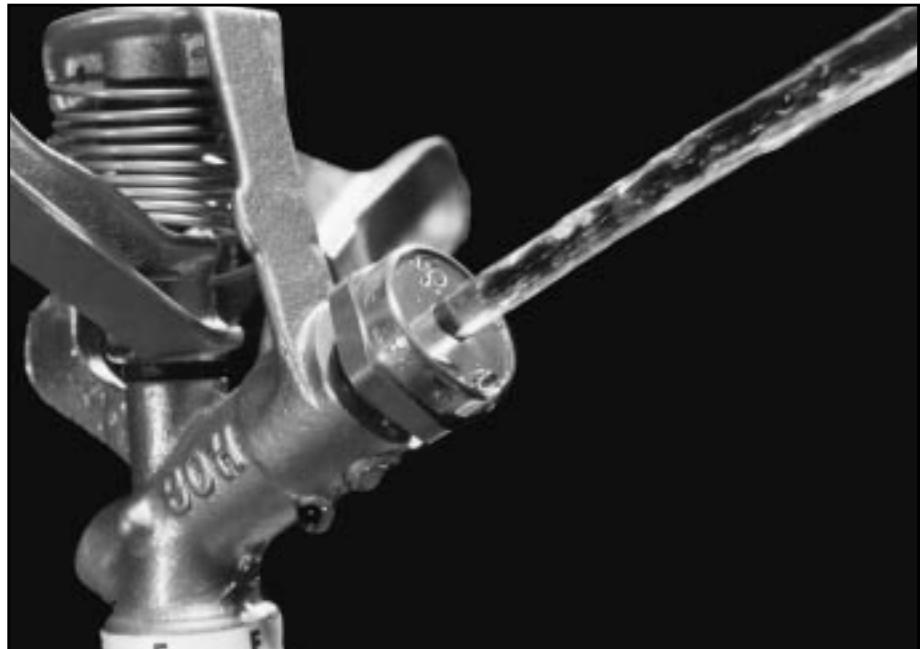

Try Rain Bird's Rain Flow™ Nozzles (RFN). For decades, growers have learned to rely on Rain Bird products. The RFN is no exception. Rain Flow Nozzles allow growers to maintain optimum water application uniformity even when the irrigation system has excessive elevation changes, fluctuating system pressures, or long, high-pressure lateral or wheel-line runs. RFN's exceptional design coupled with Rain Bird reliability make Rain Flow Nozzles the right choice for growers who rely on performance and quality.

### Features & Benefits

- Uniform flow control over a very wide range of operating pressures
- Pump and pipeline damage is prevented by managing flow control
- RFNs accept standard stream straightening vanes to increase distance of throw
- Unique design offers complete support of flow washer during operation, regardless of pressure
- Wide range of flows from which to choose
- Competitively priced
- RFNs are covered by a TWO-YEAR warranty

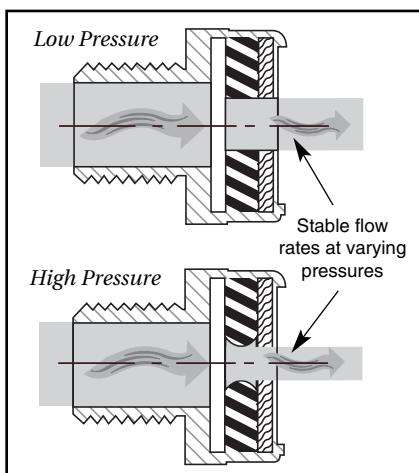

### Operating Specifications

- Pressure: 30 to 110 psi (2 to 7.5 bar)
- Optimum Pressure: 40 to 80 psi (2.75 to 5.5 bar)
- Install nozzle hex flat on top to prevent interference with drive arm.

Rain Flow Nozzle shown on 30H Impact Sprinkler

The RFN has an elastomer washer that controls the size of the orifice. When no pressure is present, the washer is in a natural and relaxed state. As system pressure increases, radial deformation occurs, contracting the elastomer washer and narrowing the orifice. The orifice size is proportionally reduced according to the pressure applied. As a result, flow is held constant even when pressures fluctuate.

### How to Specify/Order:

RFN - 1 - 1.75		
Model	Type of Connection	GPM Size
1 = use with 1/2" sprinklers	1.0	1.75
3 = use with 3/4" sprinklers	2.0	2.5
	3.0	3.5
	4.0	4.5
	5.0	5.5

## Specifications

The nozzle shall be capable of covering a \_\_\_\_\_ feet radius / (meter) at \_\_\_\_\_ pounds per square inch (psi) / (bars) with a discharge rate of \_\_\_\_\_ gallons per minute, (gpm) / (m³/h).

The nozzle shall be constructed of an elastomer washer, a brass housing and a stainless steel washer.

The nozzle shall accept standard stream straightening vanes to increase distance of throw.

The Rain Flow Nozzles shall be as sold by Rain Bird Corporation, Glendora, California.

## TECH SPECS

### 3000 Series Rain Guns® Two Inch, Full and Part Circle

**Longer life, improved performance and better value – guaranteed!**

The new 3000 Series Rain Gun® brings Rain Bird back to the forefront of quality, performance, and reliability. This next generation model incorporates recent end user feedback and new materials to bring you the best value in today's high volume sprinkler market. To back up this claim, Rain Bird offers the best warranty in the industry. For all agricultural applications, the 3000 Series Rain Gun is backed by an unprecedented 3-year warranty. No other gun manufacturer in the industry stands behind their product for this long.

#### SR3003 and F3002 Features

- 23° body trajectory
- Laser cut, spring loaded, stainless steel arm
- Improved spoon design with adjustable spoon bracket to increase or decrease rotation speed
- Set of 6 metric, taper bore nozzles included - 14, 16, 18, 20, 22, & 24 mm (.55, .63, .71, .79, .87, .94 inches)
- Integral straightening vanes
- Stronger body assembly
- Reinforced linkage assemblies
- Self-adjusting brake mechanism
- Sealed lube-for-life bearing
- Improved trip-collar adjustments
- 6 hole, flange mount standard
- NPT and BSP flange adapters
- Counterweight available for sloped conditions
- 3 year warranty

#### High Standards means Longer Life

Some of the factors that lead to long life and low maintenance:

- Rain Guns are manufactured to the highest standards in a factory that is ISO9002 certified.
- Every Rain Gun is water tested before it leaves the factory.

SR3003 Slow Reverse Rain Gun

- Grease maintenance is eliminated with permanently sealed bearings.
- The braking system is also maintenance free with new springs for 2002 to allow for reliable rotation and reduced sensitivity to uneven pressure conditions.
- Trip mechanisms are reinforced with stainless steel washers and cotter pins. Straightening vanes are extruded directly into the body to reduce fluid turbulence and add strength and distance to the water stream.

#### Lower Maintenance

Rain Guns are designed to keep working for years with minimal maintenance. Many of our competitors pack their bearings less than 30% full. This unfilled space allows for condensation and water build-up which can lead to an eventual breakdown of the grease, corrosion, and bearing failure. This is why all Rain Gun bearings are permanently sealed and packed 70% full with a robust, wide temperature range, water resistant silicone grease.

The braking system is also maintenance free. The spring loaded break self-adjusts to keep consistent rotation times through the life of the gun. All trip mechanisms are reinforced with stainless steel washers and cotter pins. Straightening vanes are molded directly into the body to cut down

## **Lower Maintenance** *continued*

on water turbulence and to add strength and distance of throw.

All body joints are bonded and threaded together using a chemical process that is rated for up to 7 tons of pressure. The trip collars are easily adjustable and stay in place without the use of tools or time consuming adjustments. The bearing assembly is marked every 10° to make arc adjustments easier.

Even with all these features, 3000 Series Rain Guns are constructed using less than 50 components. Fewer components mean fewer problems so you can rest easy – confident in your decision to choose Rain Bird.

## **The Best Value**

- Aluminum body construction with stainless steel hardware to provide all the value at the lowest price possible.
- All accessories are included in each box including:
  - Standard 2 mm neoprene gasket and bolt kit for the mounting flange.
  - Set of 6 taper bore nozzles – 14, 16, 18, 20, 22, & 24 mm sizes.
  - Glycerin filled pressure gauge to ensure optimal setup.

- Comprehensive user manual with installation and application troubleshooting tips.

## **Outstanding Performance**

The 3000 Series Rain Guns are built to perform and to last. The all new arm is laser cut from a solid sheet of stainless steel to provide maximum strength, durability and corrosion resistance. The spoon is molded from chemical and impact resistant Delrin®. A stainless steel spring absorbs excess shock from the arm which allows for a much smoother arm stroke, and the removal of excess counterweights. With the counterweights out of the way, the arm can be centered directly over the body of the gun, distributing weight evenly. By reducing the weight of the gun and bringing it into balance, excess vibration and wear are reduced which dramatically improves the performance and life of the gun.

*Stainless steel arm with Delrin® spoon*

*Set of 6 taper bore nozzles*

## Specifications (For Specifiers)

The full circle or part circle impulse drive sprinkler shall be a single nozzle type, capable of covering \_\_\_\_\_ (feet/meters) radius, at \_\_\_\_\_ (PSI/bars) with a discharge rate of \_\_\_\_\_ (GPM/M3H). The sprinkler body and bearing sleeve shall be of heat treated, cast aluminum.

Straightening vanes shall be integral to the body. The sprinkler arm, springs, fulcrum shafts, and trip mechanisms shall be stainless steel. All trip mechanisms shall be reinforced with stainless steel washers and cotter pins. The drive nozzle trajectory shall be 23 degrees from horizontal.

The rotation of the sprinkler shall be accomplished by a spring loaded, stainless steel vertical oscillating arm, actuated by the outlet water stream. The part circle models shall have a slow-reverse feature for reduced vibration and greater safety. A stainless steel spoon bracket assembly can be adjusted to increase or decrease rotation speed.

The nozzle and spoon assembly shall be durable, chemically resistant plastic and shall be easily replaceable. A set of six metric sized, taper bore nozzles shall be included with the gun - 14, 16, 18, 20, 22, & 24 mm (.55, .63, .71, .79, .87, .94 inches). The nozzle size shall be molded into the plastic for easy identification.

The bearing assembly shall be permanently sealed and packed 70% with a wide temperature range, water resistant silicone grease. The brake mechanism will be spring loaded and self-adjusting.

On part circle models, adjustable friction collars will be supplied to set arc adjustments without the use of tools, and the bearing assembly will be marked in ten degree increments to facilitate adjustments.

The F3002 shall be for full circle operation only. The SR3003 shall have adjustable part circle or full circle operation.

The sprinkler shall have six hole flange inlets, and a 2 mm (.08") neoprene gasket and bolt kit shall be supplied with the gun.

An optional (NPT/BSP) flange adapter will be supplied to adapt the flange inlet to a (2"/50 mm) female inlet.

The sprinkler shall carry a three year warranty against original defects in material or workmanship in agricultural applications. The sprinkler shall be supplied by Rain Bird Sprinkler Mfg. Corp., Glendora, California.

## Rain Gun Warranty

### Agricultural Applications

- Our latest generation of Rain Guns is built on a legacy of knowledge, trust, and feedback from end users. Our warranty is simple and in line with Rain Bird's reputation as the most reliable agricultural sprinkler manufacturer in the world. To back up our claim, we offer the best warranty in the agriculture industry. For all agricultural applications, we offer a three-year, no questions asked warranty including free service or parts replacement. Product replacement, full credit, or return in lieu of spare parts or service is at Rain Bird's discretion upon approval. Approval may include product testing.

### Non-agricultural Applications

- We understand that Rain Guns are often utilized in applications that may be more demanding than general agricultural applications. In these circumstances, Rain Bird offers an eighteen month warranty including free service or parts replacement, but excludes coverage in the following general applications or environments:
  - Electrolytic conditions, such as high salt environments or salt water spray applications
  - Applications where environmental conditions are not compatible with the materials used in Rain Guns
  - Caustic or corrosive chemical conditions or spray applications
  - Abrasive fluid spray applications

### 2000 Series Rain Guns® Three Inch, Full and Part Circle

#### ***Longer life, improved performance and better value – guaranteed!***

The new 2000 Series Rain Gun® brings Rain Bird back to the forefront of quality, performance, and reliability. This next generation model incorporates recent end user feedback and new materials to bring you the best value in today's high volume sprinkler market. To back up this claim, Rain Bird offers the best warranty in the industry. For all agricultural applications, the 2000 Series Rain Gun is backed by an unprecedented 3-year warranty. No other gun manufacturer in the industry stands behind their product for this long.

#### ***SR2005 and F2004 Features***

- 23° body trajectory
- Dual spring loaded, cast aluminum arms
- Adjustable aluminum spoon design
- Set of 6 metric taper bore nozzles included 21, 23, 26, 28, 30, 33 mm
- Ring orifice nozzles available .87, .99, 1.1, 1.2, 1.29, & 1.38 inches (22, 25, 28, 30, 33, 35 mm)
- Integral straightening vanes
- Stronger body assembly
- Improved trip assembly
- Self-adjusting brake mechanism
- Sealed lube-for-life bearing
- Improved trip-collar adjustments
- DN 80 (3") 4 or 6 hole flange mount standard
- NPT and BSP flange adapters
- Counterweight available for sloped conditions

SR2005

#### ***High Standards means Longer Life***

Some of the factors that lead to long life and low maintenance:

- Rain Guns are manufactured to the highest standards in a factory that is ISO9002 certified.
- Every Rain Gun is water tested before it leaves the factory.
- Trip mechanisms are reinforced with stainless steel washers and cotter pins. Straightening vanes are extruded directly into the body to reduce fluid turbulence and add strength and distance to the water stream.

#### ***Lower Maintenance***

## Specifications (For Specifiers)

The full circle or part circle impulse drive sprinkler shall be a single nozzle type, capable of covering \_\_\_\_\_ (feet/meters) radius, at \_\_\_\_\_ (PSI/bars) with a discharge rate of \_\_\_\_\_ (GPM/M<sup>3</sup>H). The sprinkler body and bearing sleeve shall be of heat treated, cast aluminum. Straightening vanes shall be integral to the body. The sprinkler arm, springs, fulcrum shafts, and trip mechanisms shall be stainless steel. The drive nozzle trajectory shall be 23 degrees from horizontal.

The rotation of the sprinkler shall be accomplished by a spring loaded, vertical oscillating arms, actuated by the outlet water stream. The part circle models shall have a slow-reverse feature for reduced vibration and greater safety.

The nozzle shall be of durable, chemically resistant plastic and shall be easily replaceable. A set of six taper bore nozzles shall be included with the gun - 21, 23, 26, 28, 30, 33 mm. The nozzle size shall be molded into the plastic for easy identification.

The bearing assembly shall be permanently sealed and packed 70% with a wide temperature range, water resistant silicone grease. The brake mechanism will be spring loaded and self-adjusting.

On part circle models, adjustable friction collars will be supplied to set arc adjustments without the use of tools, and the bearing assembly will be

marked in ten degree increments to facilitate adjustments.

The F2004 shall be for full circle operation only. The SR2005 shall have adjustable part circle or full circle operation.

The sprinkler shall have a DN 80 4 or 6 hole patterns with a 2 mm (.08") neoprene gasket and bolt kit shall be supplied with the gun.

An optional (NPT/BSP) flange adapter will be supplied to adapt the flange inlet to a (3"/76 mm) female inlet.

The sprinkler shall carry a three year warranty against original defects in material or workmanship in agricultural applications. The sprinkler shall be supplied by Rain Bird Corporation, Glendora, California.

## Rain Gun Safety

Operating Rain Guns remotely under circumstances where the operator cannot see the gun being activated can be dangerous if persons or animals are close to the device. When activated these guns can come on with significant force. Operators should also be aware of trip hazard, over-head obstruction, thrust, etc. for their applications, to prevent any bodily harm. If an operator has any question pertaining to Rain Gun Safety please contact your local dealer or Rain Bird representative.

## Rain Gun Warranty

### Agricultural Applications

- Our latest generation of Rain Guns is built on a legacy of knowledge, trust, and feedback from end users like you. Our warranty is simple and in line with Rain Bird's reputation as the most reliable agricultural sprinkler in the world. To back up our claim, we offer the best warranty in the agriculture industry. For all agricultural applications, we offer a three-year; no questions asked warranty including free service or parts replacement. Product replacement, full credit, or return in lieu of spare parts or service is at Rain Bird's discretion upon approval. Approval may include product testing.

### Non-agricultural Applications

- We understand that Rain Guns are often utilized in applications that may be more demanding than general agricultural applications. In these circumstances, Rain Bird offers an eighteen month warranty including free service or parts replacement, but excludes coverage in the following general applications or environments:
  - Electrolytic conditions, such as high salt environments or salt water spray applications
  - Applications where environmental conditions are not compatible with the materials used in Rain Guns
  - Caustic or corrosive chemical conditions or spray applications
  - Abrasive fluid spray applications

## PC Dripline

### Pressure Compensating Inline Emitter Tubing

## PC Dripline

**Rain Bird PC Dripline** is the latest in inline emitter tubing. It delivers unparalleled clog resistance for long-term reliability. Pressure compensation is achieved by varying the length of the large labyrinth – the greater the pressure, the longer the labyrinth. Moreover, it's supported and backed by the industry's most capable dealer network.

The Rain Bird PC Dripline emitter has the largest cross-sectional water passage area during pressure compensation which results in superior clog resistance. Grit tests conducted by the Center for Irrigation Technology (CIT) confirmed Rain Bird PC Dripline's superior clog resistance. Test results are available from CIT or Rain Bird.

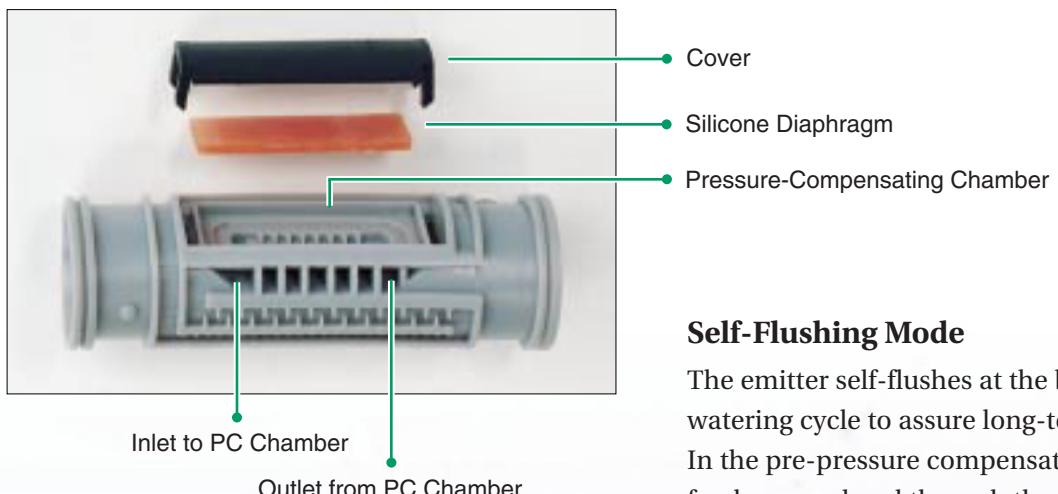

The high emission uniformity, which exceeds 96%, means more consistent emitter flow over the entire lateral length. Rain Bird PC Dripline has an average Manufacturing Coefficient of Variation ( $Cv \leq 0.05$ ).  $Cv$  measures consistency of emitter output from one emitter to the next. The lower the  $Cv$  value, the more consistent the emitter output. The American Society of Agricultural Engineers considers any  $Cv$  below 0.05 to be excellent.

Rain Bird PC Dripline is widely used on:

- Tree Crops
- Row Crops
- Vineyards
- Nurseries

## How PC Dripline Works

### Self-Flushing Mode

The emitter self-flushes at the beginning and end of each watering cycle to assure long-term reliable performance. In the pre-pressure compensating mode, the water flows freely around and through the labyrinth, flushing any contamination through the emitter outlets.

### Pressure Compensation without Flow Path Reduction

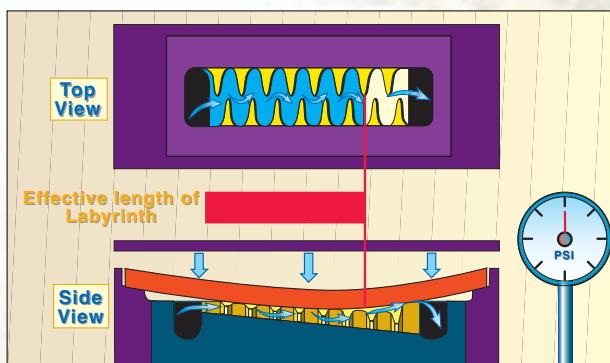

Conventional emitters pressure compensate by using a restrictive metering groove that increases the likelihood of clogging. Using a new, patented technology, the PC Dripline emitter eliminates the metering groove. Pressure compensation is achieved by gradually lengthening the turbulent flow path which is significantly larger than conventional metering grooves.

### Rain Bird PC Dripline Flow Path Lengthens as Pressure Increases

As pressure increases, the diaphragm begins to compress longitudinally against the emitter's sloped labyrinth. This compression lengthens the tortuous path through which the water must pass without reducing the cross-sectional size of the flow path. The cross-sectional area of the Rain Bird PC Dripline emitter flow path at higher pressure is significantly larger than that of conventional pressure compensating inline emitters. The result is the most clog-resistant, pressure compensating inline emitter available.

### Compensation Mode

As pressure increases, the diaphragm is further pushed against the labyrinth. This increases the effective length of the labyrinth.

## Features and Benefits

### Key Features of Rain Bird PC Dripline

**Patented emitter design**

**High emission uniformity**

**Fully pressure compensating  
between 8-60 psi**

**Excellent average manufacturing  
coefficient of variation ( $Cv \leq 0.05$ )**

**Multiple inlet design**

**Emitter flushes during start up,  
and shut down**

**Filtered inlets are located 180 degrees  
apart**

**Two outlet ports positioned 90 degrees  
apart**

### Benefits to Growers

- Reduced system maintenance costs
- Greater yields
- Longer product life

- Uniform plant growth
- Greater yields
- Water savings
- Chemical savings

- Even distribution of water over the length of the run
- Longer runs
- Improved productivity on undulating terrain
- Total system cost savings

- Consistent flow among all the emitters
- Uniform plant growth
- Greater yields

- Longer product life
- Superior clog resistance

- Lower system maintenance costs
- Longer product life
- Better uniformity
- Improved clog-resistance

- Orientation of emitter does not affect performance
- Cleanest water enters emitter
- Less susceptible to clogging

- One port is always open to atmosphere
- Reduces chances of back-siphoning and clogging

## PC Dripline - 16mm, .4 gph

### Product Specifications

	PC Dripline 16mm
Minimum Operating Pressure (psi)	8.5
Maximum Operating Pressure (psi)	60
Maximum Air Temperature	140°F
Maximum Water Temperature	110°F
Emitter Flow Rate (gph)	.4
Coil Length (feet)	1000
Filtration (mesh)	120
Outer Diameter (inches)	.630
Inner Diameter (inches)	.540
Wall Thickness (inches)	.045

Custom emitter spacing available, please consult factory.

## PC Dripline - Tech Spec

The Center of Irrigation Technology (CIT) test results demonstrate that Rain Bird PC Dripline is the most clog resistant dripline available.

**CIT Test Results  
PC Dripline Emitter Plugging**

\*Filtered at 200 Mesh

### Tech Spec

The flexible polyethylene tubing shall have factory installed, pressure compensating, inline emitters installed every \_\_\_\_ inches. The flow rate from each installed inline emitter shall be a consistent \_\_\_\_ gallons per hour when inlet pressure is between 8.5 and 60 psi.

Pressure compensation shall be accomplished through the effective lengthening of the emitter flow path. This method of pressure compensation shall in no way reduce the size of the emitter flow path. As a result, superior clog-resistance shall be achieved.

The inline emitter's cylindrical shape shall permit the welding of the emitter to the inner circumference of the polyethylene tubing. This shall create a physical barrier that keeps the cover of the inline emitter securely in place. This will make the emitter cover and the silicone diaphragm beneath the cover impossible to dislodge when the polyethylene tubing is kinked. This, in turn,

shall ensure consistent flow from each inline emitter throughout the line.

The inline emitter's cylindrical shape shall provide surface area for filtration throughout the 360 degrees of its outer circumference. This increased filtration surface area shall assure that the water that enters the inline emitter can always come from the upper half, or cleanest part of the flow path in the polyethylene tubing regardless of how the inline tubing lays on the ground.

The inline emitter shall also have dual outlet ports, ensuring that only one port ever has direct contact with the ground when the polyethylene tubing is installed on the surface. This shall virtually eliminate the chance of back-siphoning debris into the tubing. The PC Dripline inline tubing shall be supplied by Rain Bird Sprinkler Mfg. Corp., Glendora, California.

**PC Drip for Windows** is a design software tool for designers and growers to evaluate Rain Bird PC Dripline performance under varying conditions including emitter flow rate and spacing, lateral length and spacing, and slope. It provides answers for optimum lateral lengths, problem slope conditions, and flow per acre. Each design scenario can be viewed graphically by lateral pressure and lateral length. This feature helps growers see where minimum pressures and flows occur in a lateral given certain design and field conditions. Please order part number L195.

## Agricultural Valves

## Agricultural Valves

Shown with Rain Bird® CYCLIK™ battery-operated controller

**Rain Bird's Cast Iron Valves**, designed specifically for agricultural applications, combine high quality, affordability, ease of installation and durable construction. These features, together with the support of the industry's most capable dealer network, will assure years of reliable, trouble-free operation.

These valves are designed with a large water passage, which results in low pressure losses. They are coated with a baked-on polyurethane layer that protects against corrosion. Valves that are 3" in diameter and larger feature a unique cover design to avoid damaging the diaphragm if the bolts are over tightened. Basic valve bodies can be equipped with a variety of control options to fit different operating conditions encountered in irrigation systems. These options include remote hydraulic control, electric solenoid control, pressure reducing, pressure sustaining, pressure relief and combinations of the above.

AG-3WAY	<b>Hydraulic Control Valve with 3-way Manual Selector</b>

AG-PS3_	<b>Pressure Sustaining Valve with 3-way Metal or Plastic Pilot</b>
AG-SRLF	<b>Quick Relief Safety Valve with Metal Pilot</b>
AG-PRPS	<b>Pressure Reducing / Sustaining Valve</b>

## Features and Options

### Key Features

#### Body

- Cast Iron ISO 185 with 220° C Baked Epoxy Coating, 4 Mil (100 micron) minimum thickness.
- Nitrile rubber diaphragm, oil resistant and non-toxic. Top-replaceable, without removing valve from line.
- Pressure rating of 235 psi (16 bar). Slow and gradual opening and closing to avoid water hammer.
- Stainless steel spring AISI304.
- Self-cleaning internal strainer.
- HPDE tube 4 x 6mm PN16 for diameters 5" and smaller.
- HPDE tube 6 x 8mm PN16 for diameters 6" and larger.

#### Options available

- Basic hydraulic valve with 3-way manual selector
- Basic valve with solenoid (24VAC, 12VDC latch, 6-9VDC latch)
- Basic valve with solenoid and 3-way manual selector
- Basic valve with 2-way metal pressure reducing pilot ^
  - 7-145 psi (0.5-10 bar)
- Basic valve with 3-way plastic pressure reducing pilot ^\*
  - 3-44 psi (0.2-3 bar)
  - 15-80 psi (1-5.5 bar)
- Basic valve with 3-way metal pressure reducing pilot ^\*\*
  - 15-101 psi (1-7 bar)
  - 88-176 psi (6-12 bar)
- Basic valve with 3-way pressure sustaining pilot ^\*\*
  - Metal: 15-101 psi (1-7 bar)
  - Metal: 88-176 psi (6-12 bar)
  - Plastic: 15-80 psi (1-5.5 bar)
- Basic valve with quick relief safety pilot
  - 15-87 psi (1-6 bar)
  - 88-176 psi (6-12 bar)
- Basic valve with pressure reducing and sustaining pilots \*

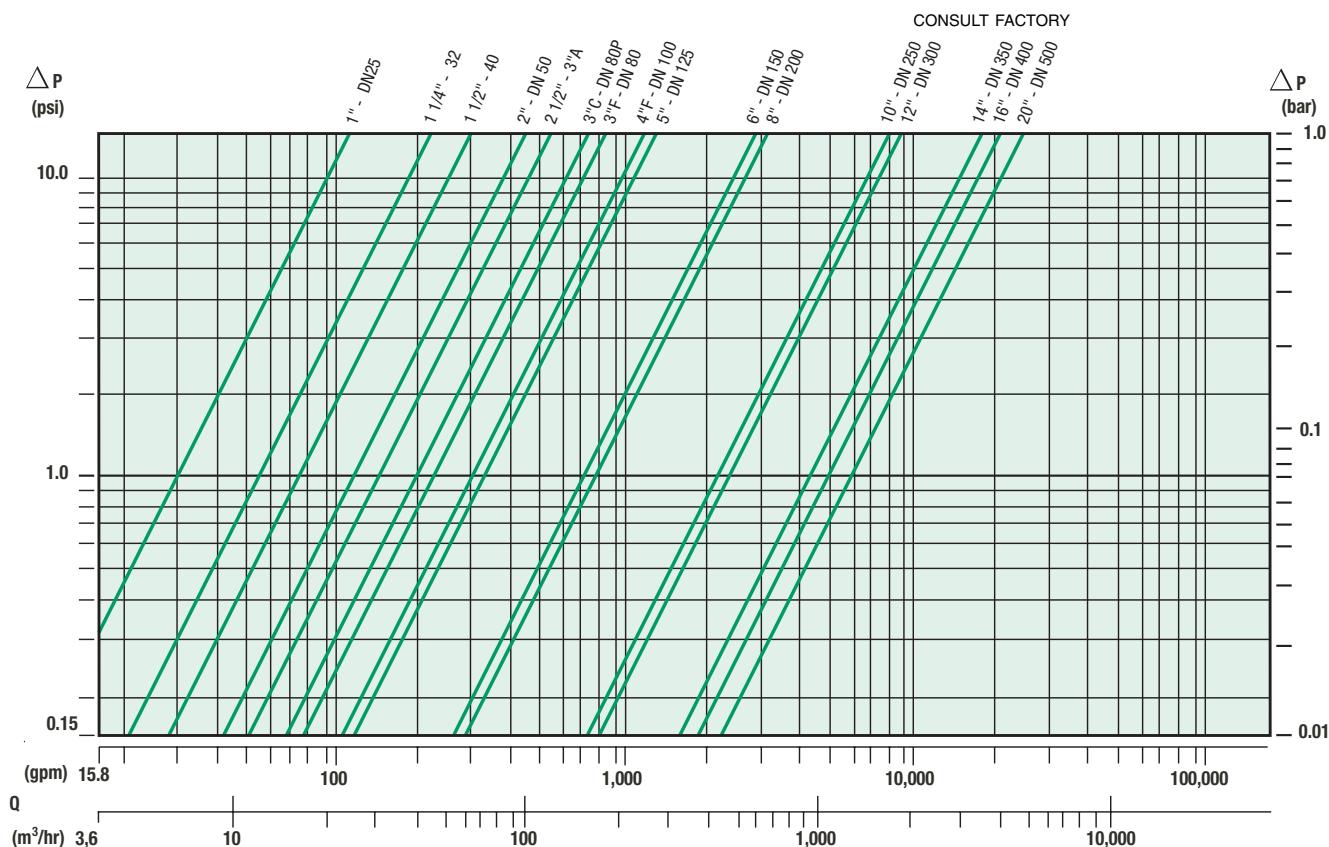

<sup>^</sup> Solenoid available as an option in these models

\* All these options include 3-way manual selector

## Specifications

### Pressure Loss vs. Flow Rate

### Flow Range Table - U.S.

DIA.	Connection*	MIN	NOMINAL	MAX	CV
		gpm	gpm	gpm	gpm

6" (DN150)	Flange	25	350	400	620
8" (DN200)	Flange	35	360	420	640

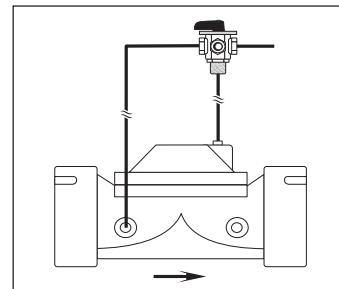

KV = Flow rate in m³/h that creates a pressure drop of 1 bar.

\* Other connections available. Consult factory.

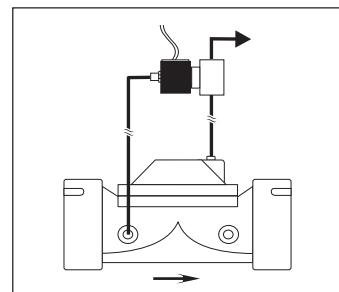

## Agricultural Valves

**AG-3WAY** Manual Hydraulic Control Valve

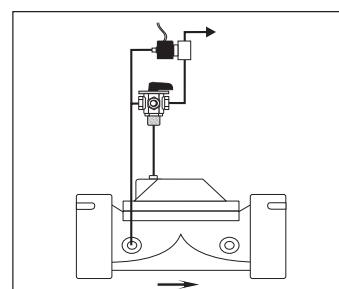

Three-way selector for manual opening and closing.

**AG-ELEC** Solenoid Control Valve

Equipped with solenoid for electric operation. Specify solenoid type when ordering.

**AG-EL3W** Solenoid Control Valve with 3-way Manual Selector

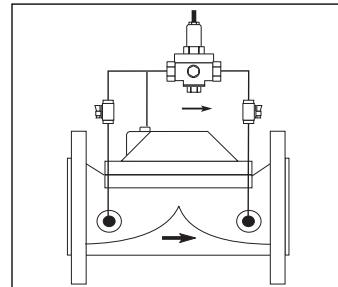

Combines manual and electric operation for greater flexibility. Specify solenoid type when ordering.

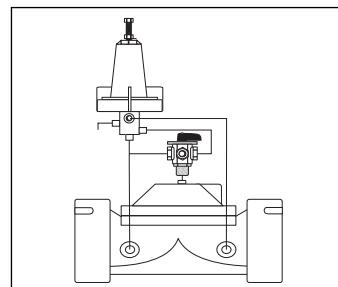

## Agricultural Valves

**AG-PR2M** Pressure Reducing Valve  
with 2-way Metal Pilot

2-way metal pilot with standard adjustment range of:  
• 7 to 145 psi (0.5 to 10 bar)  
**Maximum reduction rate: 4:1.**  
Valve can be equipped with a 2-way solenoid. Specify solenoid type when ordering.

**AG-PR3P** Pressure Reducing Valve  
with 3-way Plastic Pilot

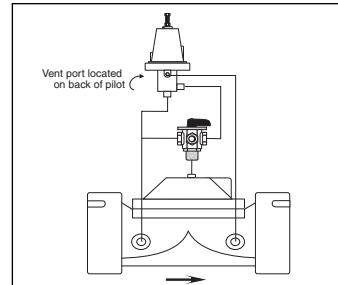

3-way plastic pilot with adjustment range of:  
• 3 to 44 psi (0.2 to 3 bar)  
• 15 to 80 psi (1 to 5.5 bar)  
**Maximum reduction rate: 4:1.**  
Includes 3-way Selector.  
Valve can be solenoid equipped.  
Specify solenoid type when ordering.

## Agricultural Valves

### AG-PR3M Pressure Reducing Valve with 3-way Metal Pilot

3-way metal pilot with adjustment range of:

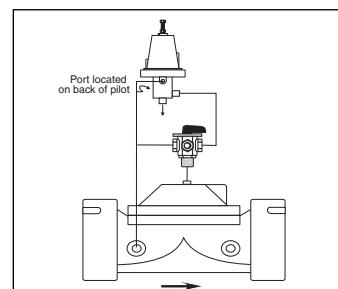

- 15 to 101 psi (1 to 7 bar)
- 88 to 176 psi (6 to 12 bar)

**Maximum reduction rate: 4:1.**

Includes 3-way Selector.

Valve can be solenoid equipped. Specify solenoid type when ordering.

### AG-PS3\_ Pressure Sustaining Valve with 3-way Pilot (metal pilot shown)

3-way pilot with adjustment range of:

- Metal Pilot: 15 to 101 psi (1 to 7 bar)
- Metal Pilot: 88 to 176 psi (6 to 12 bar)
- Plastic Pilot: 15 to 80 psi (1 to 5.5 bar)

**Maximum reduction rate: 4:1.**

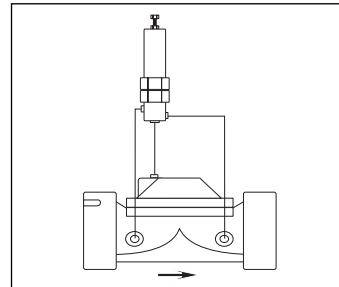

Includes 3-way Selector.

Valve can be solenoid equipped. Specify solenoid type when ordering.

## Agricultural Valves

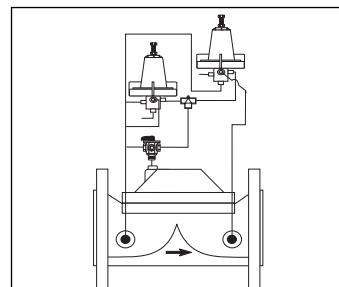

**AG-SRLF** Quick Relief Safety Valve  
with Metal Pilot

Quick relief metal pilot with  
adjustment range of:

- 15 to 87 psi (1 to 6 bar)
- 88 to 176 psi (6 to 12 bar)

**AG-PRPS** Pressure Reducing / Sustaining Valve  
(plastic pilot shown)

Two 3-way pilots for accurate  
control of downstream and  
upstream pressure.  
Includes 3-way Selector.

## TECH SPECS

# Valves for Agricultural Irrigation

- PGA 1", 1 1/2", and 2" Plastic Electric Valves 24VAC
- PESB 1", 1 1/2", and 2" Plastic Electric Valves 24VAC
- BPES 3" Hybrid Brass and Plastic Electric Valves 24VAC

Rugged, reliable, versatile. Rain Bird valves are engineered to perform under demanding conditions in agricultural irrigation systems. Got dirty water? Just use the PESB or BPES Series valves with the patented self-cleaning scrubber feature, which keeps grit and contaminants from building up and clogging internal ports. Need pressure regulation? Add the new optional PRS-D dial pressure regulating module for smooth, accurate downstream pressure control.

All valves feature the internal bleed solenoid for manual operation, even with pressure regulation. And all of this performance is available at an affordable price. Rain Bird valves, performance and value.

### Applications

- Zone control for sprinkler and micro irrigation systems
- System headworks control
- Master valve pressure regulation
- Filter control
- Specialty Rain Gun systems - wastewater, dust control of coal piles and feedlots, pastures, arenas, and logyards

### Common Features

- Flow control handle to adjust flows as needed
- Turn of solenoid handle permits manual operation with internal bleed. Allows pressure regulation without electrical operation. (BPES model - turn the adapter 1/4 turn counterclockwise)
- Electrical
  - Power: 24 VAC 50/60 cycle solenoid
  - Inrush current: 0.41 A (9.9 VA)
  - Holding current: 0.28 A (6.7 VA)
  - BPES: Model A solenoid with adapter
- One-piece solenoid design with captured plunger and spring for easy servicing

PESB Series 1 1/2"

BPES Series 3"

PGA Series 1 1/2"

## PESB and BPES Series Valves

Built-in rugged performance for the toughest field conditions

The heavy duty PESB and BPES valves are designed to handle dirty water and pressure surges often found in agricultural irrigation systems. Both

feature the patented nylon scrubber device, which scrapes a stainless steel screen every time the valve opens and closes. This prevents debris build-up and clogging, with no external piloting. The PESB 1", 1 1/2", and 2" series globe valves are constructed of industrial-strength glass-filled nylon with stainless steel studs for long term service and easy maintenance.

The BPES 3" series globe / angle valves feature brass body and glass-filled nylon bonnet construction. Both are built to withstand 200 psi (13,8 bars) operating pressure. An external bleed manual operation is standard for evacuating debris without passing through the solenoid ports. And their low flow operating capabilities ensure reliable operation for both sprinkler and micro irrigation systems.

### PESB and BPES Features

- Durable glass-filled nylon construction (BPES has heavy duty brass body) rated to 200 psi (13,8 bars)
- Patented scrubber mechanism to resist clogging of internal ports
- Manual internal and external bleed Pressure regulation operation without electrical signal using internal bleed (BPES model - turn adapter)

- Globe configuration (BPES only: Globe and angle configuration)

- Convert to pressure regulating operation by adding PRS-D module (Shown with BPES)

### Operating Range

- Pressure: 20 to 200 psi (1,38 to 13,8 Bars)
- Flow: 0.25 to 300 gpm (0,06 to 45,40 m³/h; 0,02 to 12,60 l/s)

### Models

- 100PESB 1" NPT (25mm)
- 150PESB 1 1/2" NPT (40mm)
- 200PESB 2" NPT (50mm)
- 300BPES 3" NPT (75mm)

Notes:

1. Valve and PRS-D module must be ordered separately
2. BSP models available, please specify when ordering

PESB 1 1/2" with PRS module

## PGA Series Valves

Globe / angle valves at an affordable price

The PGA series valves are high performance, versatile, and economical. These globe and angle configuration valves allow installation either inline or on risers feeding individual zones.

And the PVC construction is designed to handle 150 psi operating pressures. Like the PESB and BPES series valves, the PGA valves have a flow control and internal bleed solenoid for manual internal bleed operation. They can also be easily converted to pressure regulating operation by adding the PRS-D. Available in sizes from 1", 1 1/2", and 2".

### PGA Features

- Globe / angle PVC construction rated to 150 psi (10,35 bars)
- Manual internal bleed. Pressure regulation operation without electrical control signal
- Convert to pressure regulating operation by adding PRS-D module

### Operating Range

- Pressure: 15 to 150 psi (1,04 to 10,35 Bars)
- Flow: 2 to 150 gpm (0,45 to 34,1 m<sup>3</sup>/h; 0,13 to 9,45 l/s)
- Temperature: up to 110 F (43 C)

### Models

- 100PGA 1" NPT (25mm)
- 150PGA 1 1/2" NPT (40mm)
- 200PGA 2" NPT (50mm)

#### Notes:

1. Valve and PRS-D module must be ordered separately
2. BSP models available, please specify when ordering

34	9.44	-	-	-	-	0.79	0.50

#### Notes:

1. Loss values are with flow control fully open.
2. PRS-D module recommended for all flow rates.

- Inlet pressure difference must be 15 psi (1 bar) greater than desired outlet pressure for PRS module to function

- Easy field installation. PRS Dial threads underneath solenoid and adapter

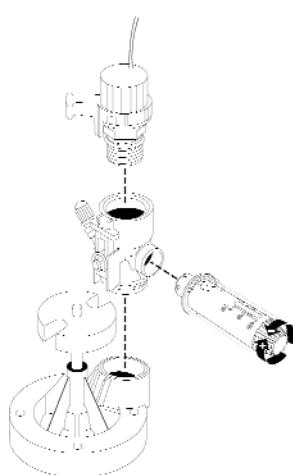

- Improved spike reduction capabilities reduce water hammer
- Dial cartridge retrofits into existing PRS-B units

### Model

- PRS-D
- PRSPIC (dial cartridge)
- PHG (pressure hose gauge)

## PRS-Dial

Pressure regulating module

The PRS-Dial is an excellent means of regulating outlet pressure at the valve.

It is used where consistent outlet pressure regulation is required regardless of inlet pressure variations. The visible scale makes installation quick and easy. The regulator fits all Rain Bird PGA, PESB, and BPES valves. Simply insert between the solenoid and valve bonnet for quick and easy field installation.

### Features

- Regulates and maintains constant outlet pressure between 15 and 100 psi (1,0 to 6,9 bars) within +/- 3 psi (+/- 0,2 bars)
- Adjustment knob with detents permits fine-tune setting in 1/3 psi (0,02 bars) increments
- Schrader valve connects pressure hose gauge, ordered separately

## Valve Wire Sizing Procedure

### Step 1

Determine actual distance, along wire run, from controller out to the first valve on a circuit and between each succeeding valve on a multiple valve circuit (as shown in example). Example: (Two watt solenoid, 26.5 volt transformer at 80 psi water pressure at valves.)

### Step 2

Calculate the equivalent circuit length for each valve circuit on the controller. (See Calculations)

### Step 3

Selecting Common Ground Wire Size: Using the longest equivalent length calculated above, go to the

appropriate valve chart and select a ground wire and a control wire that are as close to the same size as possible (the ground wire size should always be equal to or one size larger than the control wire size.) In the example above, the circuit for station #3 has the longest equivalent length, 7000 feet. In the chart (for this example use the chart for 80 psi water pressure at the valve and a 26.5 volt transformer) select a wire size of 14 for both the common ground wire and control wire. Since one common ground wire shall be used for all valves on the controller, you have now established the common ground wire size for that controller as size 14 wire.

### Step 4

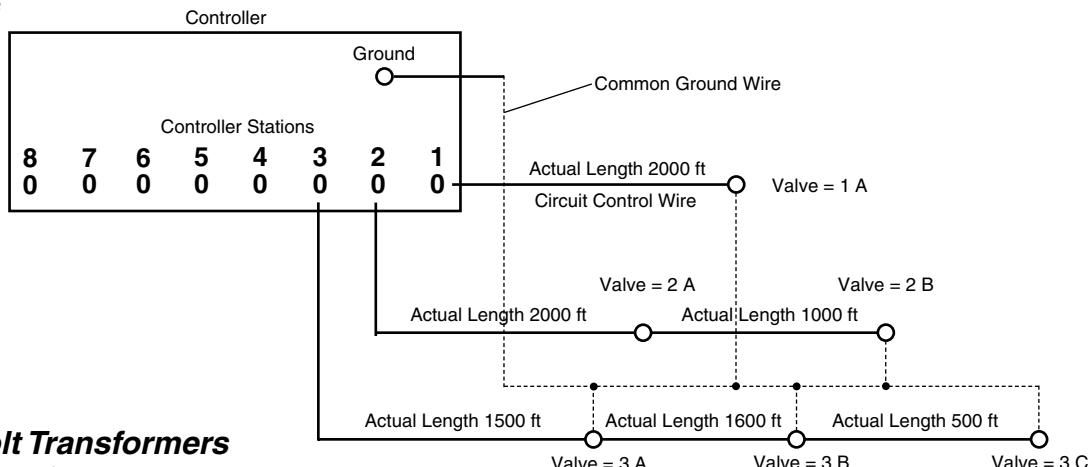

Sizing Circuit Control Wires: Using the common ground wire size selected in Step 3 (size 14), proceed to select each control wire size from the chart using the calculated equivalent length for each circuit.

#### Calculations:

**Station #1:** Equiv. Length = 1 valve x 2000 ft. = 2000 ft. select size 18 control wire

**Station #2:** Equiv. Length = (1 valve x 1000 ft.) + (2 valves x 2000 ft.) = 5000 ft. select size 16 control wire

**Station #3:** Equiv. Length = (1 valve x 500 ft.) + (2 valves x 1000 ft.) + (3 valves x 1500 ft.) = 7000 ft. select size 14 control wire

### Valves with 26.5 Volt Transformers

Equivalent Feet of Circuit Length

#### 80psi (5.5 bars) Water Pressure at Valve

## Controllers

## TECH SPECS

# Wireless Automatic Control System

The Rain Bird® CYCLIK™ wireless control system is battery operated for economical automation of an irrigation system, without AC power and without control wires.

The CONTROL MODULE has a 9-volt battery located in a weatherproof enclosure and operates latching solenoids to interrupt water flow to the valve chamber and provide on/off control of up to four valves.

The FIELD TRANSMITTER uses simple programming steps to create a coordinated irrigation schedule for up to 85 control modules. Programs are loaded into the optical port of the control modules through an infra-red link.

The simple programming menu in the field transmitter is used to set up the irrigation schedule for each valve. Then, the transmitter is taken to the field to load the program into each control module via the optical port. After the programs are loaded, each valve will operate until a new program is entered. The programming can be created to repeat a sequence, or operate one time, then remain off.

There are two models of field transmitters for different irrigation applications:

- Cyclik CI controls a series of valves to open and close in a sequence such as "pulse" irrigation of a solid set sprinkler or drip system.
- Cyclik Micro controls valves to open and close at specific times per day.
  - ▶ Micro Mode A allows four programs, and up to eight start times per day on a weekly schedule.
  - ▶ Micro Mode B allows multiple start and stop times within a specific time window, for use in a system with frequent daily irrigation and rest intervals.

CYCLIK control module shown operating two Rain Bird cast iron hydraulic valves.

### Features

- Accurate, synchronized control without control wires or AC power
- Weatherproof optical port
- Simple menu-driven programming
- Programming changes are made only through the field transmitter
- One year control module operation with one 9-volt alkaline battery
- On/Off rainy weather control via the field transmitter
- Synchronized control of up to 85 irrigation blocks

### Benefits

- Low cost installation
- Trouble-free operation, even under water
- Saves time and reduces errors
- Unauthorized individuals cannot change irrigation programs
- Battery is reliable for one irrigation season
- Saves water by allowing shut-off during rain without losing the stored program
- Economical system, even for large farms

CYCLIK control module and field transmitter connected via optical port.

### How to Specify/Order:

Part Number	Description
JA1100	Cyclik CI Field Transmitter
JA1300	Cyclik Micro Field Transmitter
JA3000	3-Way Latching Solenoid
JA3001	Control Module - 1 Valve
JA3002	Control Module - 2 Valves
JA3004	Control Module - 4 Valves
71P51018	Bracket (attaches control module to valve)
TBOSPSOL	2-Way Latching Solenoid

## Cyclik CI

Many growers who use drip irrigation have found that frequently turning the drip laterals off and on will spread out the water in the ground to create a broader wetting pattern. This also avoids saturation and promotes better oxygenation of the plant roots. By spreading the wetting pattern, excess deep percolation can also be avoided.

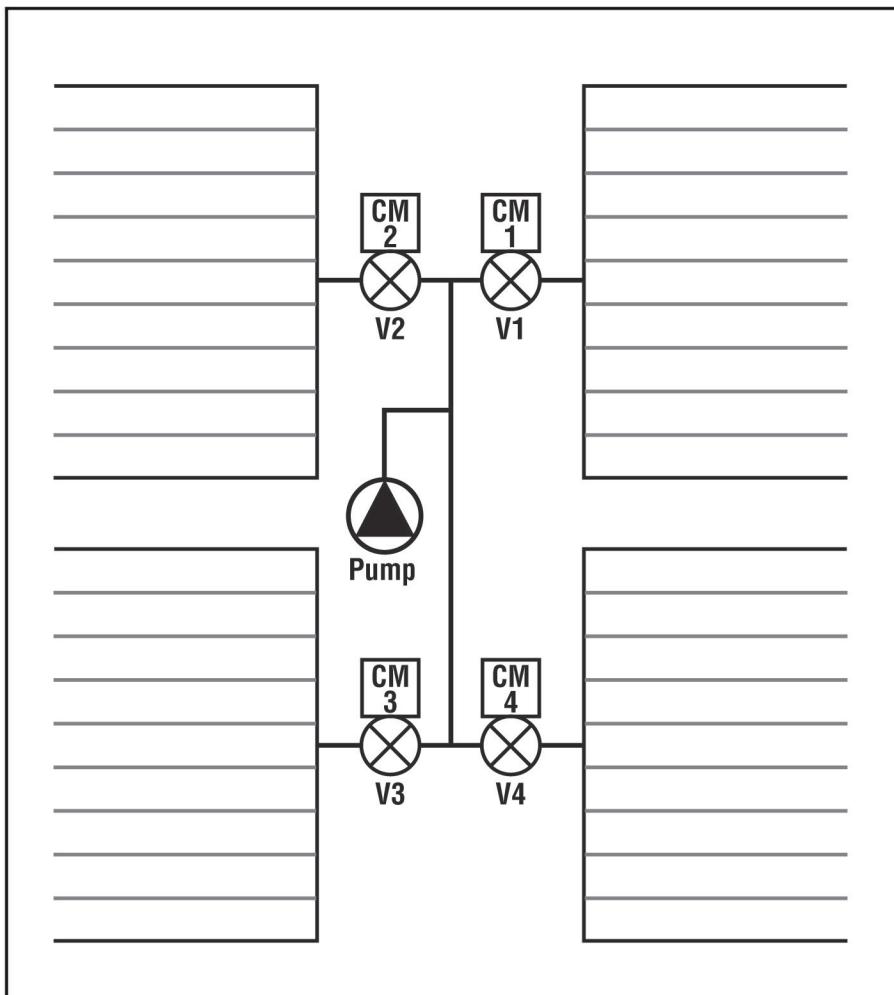

The Cyclik CI, combined with Rain Bird automatic valves provides an ideal system for pulse irrigation. As many as 85 valves can be programmed to open and close in a coordinated sequence. The Cyclik CI also features a time overlap between valve operations so that the next valve will be sure to be open before the previous valve closes. Cyclik does not allow a pump to operate against a closed system, so this avoids the situation where a pump could "dead head".

The simple four valve system illustrated here shows the location of the Cyclik control modules and Rain Bird valves, with connecting piping to the water source. For example, suppose the grower wants to irrigate each block for one hour, then rest each block for three hours. The Cyclik CI field transmitter would be programmed to operate block 1 for one hour, then open the valve for block 2 slightly before closing the valve for block 1. One hour later, the valve for block 3 would open, slightly before closing block 2, and so on until all four blocks receive one hour of water.

The Cyclik control modules can be programmed to repeat the pulsing schedule as many times as necessary to apply the required irrigation to all blocks. After the irrigation is completed, the grower can turn off the pump. A popular option is to program the Cyclik control modules to keep opening and closing the valves, even while the pump is off. This approach means that one of the valves will be open at all times, so a grower can start an irrigation at any time by simply starting the pump. Once the water is on, the Cyclik control modules operate the valves to provide "pulse" irrigation to the field.

### Key Features

- Works with single station control modules
- Maximum irrigation time is 23 hours, 55 minutes
- Maximum overlap between valves is 120 seconds
- Maximum 14 days between irrigation cycles
- Up to 85 control modules

Typical field layout with Cyclik control of each valve in a sequence.

## Cyclik Micro Mode A

Growers who need to irrigate on a weekly schedule may use Cyclik Micro Program A. The first step is to choose the days of the week to receive irrigation, and skip the days that will not get water. Next, set the start time and run time, up to 8 start times per day, and the Cyclik control modules will repeat the program until a new program is entered.

### **Key Features**

- Works with 1, 2, or 4 station control modules
- Up to 8 start times and run times per day
- Can assign an independent program to each station

Example: A remote pasture requires irrigation Monday through Friday only. On irrigation days, the pasture needs two irrigations per day, three hours starting at 5 AM, and for one hour starting at 3 PM.

*Controlling a Rain Bird Rain Gun on a remote pasture without electric power or wiring.*

## Cyclik Micro Mode B

This sequence is designed for growers that want to operate on the same schedule every day, and need to irrigate in short bursts, followed by a "soak-in" time. After the time of day is set, the next step is to enter the start time and end time of the irrigation window (up to 2 irrigation windows per day). Once the irrigation windows are set, the final step is to enter the run time (from 10 seconds up to 99 minutes), and soak time (up to 99 minutes) within the irrigation windows.

### **Key Features**

- Works with single station control modules
- Up to 2 irrigation operating windows per day
- 10 seconds to 99 minutes irrigation "run time"
- 1 minute to 99 minutes "soak time"

Example: A Greenhouse requires 30 seconds on and 3 minutes off all day from 6 AM to 7 PM.

*Greenhouse application with many short on-cycles during an irrigation "window".*

## Additional Features

### Manual control

 All Cyclik products have the option of manual control with the field transmitter to close or open a valve immediately.

### ON/OFF control

 An ON/OFF mode is also available. In the OFF mode, the program is kept from operating (and valves are not allowed to open) until the control modules receive an ON command. This feature is used often during rainy periods when the grower does not wish to irrigate, but wants to store the program in the control modules for activation in the future.

### Program review

The system also allows the grower to take the field transmitter to the field and review the program in each control module by connecting the optical port and choosing the key.

*Automated irrigation of a corn field with Cyclik control system.*

*This control module was buried for 2 weeks due to flooding.  
Infra-red communication with the field transmitter still worked.*

## Micro-Quick™ Sprays and Micro-Bird® Spinners

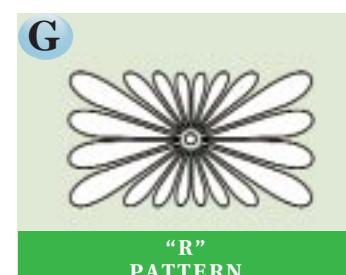

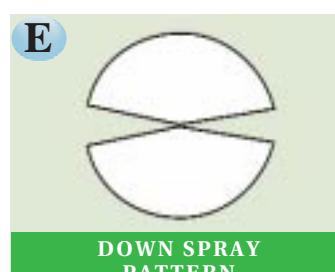

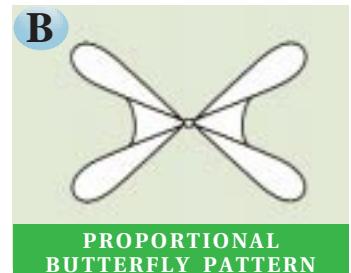

# Micro-Quick™ Sprays

## Nozzle Watering Patterns

# Features and Benefits

## Micro-Quick

A Micro-Quick™ system leads to efficient use of water, chemicals and energy, and reduced labor, inventory and management time needed to make system modifications for various growing conditions. Micro-Quick sprays are the only micro sprays available with reversible dual pattern deflectors and a selection of deflector pattern combinations available to meet your specific application requirements.

- No tools are required to remove and re-install nozzle/deflector on the bayonet mount.
- Nozzle/deflector assembly is easily removed for cleaning.
- Quickly change the nozzle/deflector assembly to achieve a higher flow rate or different spray pattern.
- The taper bore nozzle design prevents debris from clogging the orifice.
- All nozzles are color-coded.

- With no moving parts, Micro-Quick is virtually maintenance free.
- Upright (upward spraying) or inverted (downward spraying) nozzle/deflector position available.
- The transfer tubing offers maximum flexibility, durability and kink-resistance.
- Wide flow range from 14,00 l/h (3.8 GPH) to 144,00 l/h (38.6 GPH).

## Micro-Bird II Spinners

The Micro-Bird II Spinner is a low-flow, micro-sprinkler ideal for applications of mature trees, greenhouses, nurseries, gardens, and landscapes.

- "Tall Bridge" and superior plastic design reduces wear and stalling.
- Unique spinner design provides a superior wetted pattern.
- "Two-Step" thread configuration to accommodate both large and small sizes of distribution tubing.
- Four color-coded nozzles for easy identification.

- 340° pattern design provides uniform coverage without wetting tree trunks.
- Low 10° trajectory angle to fight wind drift.
- Filtration mesh hole size should be approximately 10 times smaller than nozzle size.

## Micro-Quick

Un sistema Micro-Quick™ lo llevará al uso eficiente del agua, sustancias químicas y energía, además de reducir la mano de obra, el inventario y el tiempo de gestión necesarios para realizar modificaciones al sistema por variaciones en las condiciones de crecimiento. Los rociadores Micro-Quick son los únicos micro-rociadores con desviadores reversibles dobles del patrón de riego y diversas combinaciones de patrones de desviación para satisfacer sus necesidades específicas.

- No se requieren herramientas para quitar el conjunto de boquilla/desviador o instalarlo en el soporte tipo bayoneta.
- Es fácil quitar el conjunto de boquilla/desviador para limpiarlo.
- Cambie el conjunto de boquilla/desviador en unos cuantos segundos para obtener un caudal mayor o un patrón de aspersión distinto.
- El diseño cónico hueco de la boquilla evita que la basura obstruya el orificio.
- Todas las boquillas están codificadas con colores.

- El Micro-Quick no tiene piezas móviles y por lo tanto casi no requiere mantenimiento.
- El desviador de la boquilla puede ajustarse a una posición vertical (roció hacia arriba) o invertida (roció hacia abajo).
- La manguera de transferencia ofrece máxima flexibilidad, durabilidad y resistencia a dobleces.
- Amplia gama de caudales: de 14,00 l/h (3.8 GPH) a 144,00 l/h (38.6 GPH).

## Rotores Micro-Bird II

El rotor Micro-Bird II es un micro-aspersor de bajo caudal, ideal para usarse en árboles maduros, invernaderos, viveros, jardines y áreas verde

- "Puente alto" y excelente diseño de plástico que reducen el desgaste y los problemas.
- Un exclusivo diseño de rotor que provee un patrón de humectación superior.
- Configuración de rosca de "dos pasos", para permitir el uso de mangueras de distribución grandes o pequeñas.
- Cuatro boquillas codificadas con colores para facilitar la identificación.

- Patrón de riego de 340° que permite aplicar el agua con una cobertura uniforme sin mojar los troncos de los árboles.
- Ángulo de trayectoria baja de 10° para resistir la deriva por viento.
- El tamaño de orificio de la malla de filtración es unas 10 veces más pequeño que el tamaño de la boquilla.

## Micro-Quick

O sistema de microaspersão Micro-Quick™ promove o uso eficiente da água, fertilizantes e energia, reduz mão-de-obra, estoque de peças e o tempo necessário para realizar mudanças na operação de acordo com as condições de crescimento das culturas. Os difusores Micro-Quick, são os únicos microaspersores do tipo spray disponíveis com dois padrões de distribuição num mesmo defletor reversível, que possui uma ampla seleção de combinações adequada para cada tipo de aplicação.

- Bocal e defletor são instalados sem o auxílio de ferramentas (possui encaixe do tipo baioneta).
- O conjunto bocal e defletor é facilmente desmontado para limpeza quando necessário.
- Mudança rápida do conjunto bocal e defletor proporcionando variação tanto na vazão como no padrão de distribuição da água.
- Design do bocal previne entupimento por pequenas partículas.
- Bocais codificados quanto a vazão, por cores diferentes.

- Sem possuir partes móveis o microaspersor Micro-Quick, não necessita de manutenção.
- O Micro-Quick tanto pode ser usado em sua posição normal (jatos para cima) como invertido (jatos para baixo).
- O conjunto de transferência (microtubo e conectores) oferece a máxima flexibilidade e são resistentes ao dobramento ou torção.
- Grande amplitude de vazão de 14,00 l/h (3.8 GPH) a 144,00 l/h (38.6 GPH).

## Micro-Bird II Spinners ("Baillarina")

O Micro-Bird II Spinner ("Baillarina") é um microaspersor de baixa vazão, ideal para aplicação em árvores, estufas, pomares, hortas, e na irrigação paisagística.

- Eficiente design estrutural e alta qualidade do material plástico permitem reduzido. Desgaste e previne contra paradas de funcionamento do microaspersor.
- Possui base com rosca em dois tamanhos a fim de acomodar microtubos de diâmetros diferentes.

- Design do microaspersor propicia um padrão de distribuição superior.
- Quatro bocais com cores diferentes para fácil identificação da vazão.
- Distribuição em 340° permite uniformidade sem molhar o tronco das árvores.
- Trajetória baixa, 10°, combate deriva causado por ventos.
- A abertura ou mesh dos filtros deve ser aproximadamente 10 vezes menor do que o diâmetro do bocal.

#### Dual Pattern

- A 360° Star Bird™
- B Proportional Butterfly
- C 120° Fan Spray
- D 360° 24 Stream Spray
- E Downspray
- F Notched Spray
- G "R" Pattern

#### Doble Aplicación

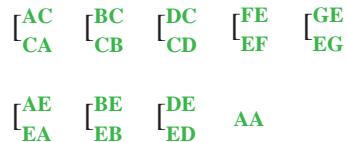

- A 360° Pájaro de Estrella (Star Bird™)
- B Mariposa Proporcional
- C 120° Abanico (Fan Spary)
- D 360° 24 Rayo (Stream Spray)
- E Abanico Doble (Downspray)
- F Patrón en "F"
- G Patrón en "R"

#### Configurações Duplas

- A Star Bird™ 360° Estrela
- B Barboleta Proporcional
- C Aspersão em Leque 120°
- D Aspersão em Jato 360°-24
- E Aspersão Invertida
- F Padrão "F"
- G Padrão "R"

#### Dual Pattern Configurations

- Doble Aplicación
- Configurações Duplas

\* Specify nozzle size (05, 08, 12, 14, 24, 33).

\*\* Specify deflector pattern to be installed down in the operational position by listing desired pattern letter first i.e., "AC"=360° Star Bird installed down in the operational position, with 120° Fan Spray installed up.

\*\*\* Specify transfer tubing length: 24" (61cm), 36" (91cm), 48" (122cm), or 60" (152cm).

Note: Allow additional delivery time for 48" (122cm) and 60" (152cm) lengths.

† Larger nozzles appear as fan spray.

Smaller nozzles may appear as individual streams.

Contact factory for more information.

Note: 1 bar = 14.5 psi; 1 m = 3.281 ft; 1 l = 0.264 gal

\* Especifique tamaño de las boquillas (05, 08, 12, 14, 24, 33).

\*\* Especifique la aplicación del desviador indicando las letras correspondientes a su configuración por ejemplo: "AC"= 360° Pájaro de Esrella (Star Bird) instalado hacia abajo con 120° Abanico (Fan Spray) hacia arriba.

\*\*\* Especifique longitud del tubo de alimentación: 24" (61cm), 36" (91cm), 48" (122cm), o 60" (152cm).

Nota: Longitud de 48" (122cm) y 60" (152cm) tienen mayor tiempo de entrega.

† Las boquillas grandes tienen forma de abanico. Las boquillas pequeñas pueden presentar forma de un sólo chorro. favor de ponerse en contacto con Rain Bird para más información.

\* Especificar o tamanho de bocal (05, 08, 12, 14, 24, 33).

\*\* Especificar a configuração do defletor para ser instalado no posição operacional, indicando primeiro a letra da configuração desejada como, por exemplo, "AC"= Star Bird 360° instalado para baixo no posição operacional e com Aspersão em Leque 120° instalado para cima.

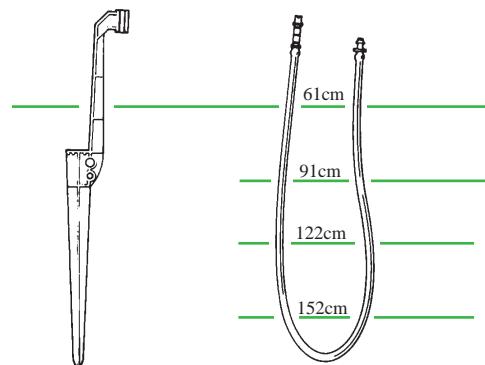

\*\*\* Especificar o comprimento da tubulação de tranferência: 24 pol. (61cm), 36 pol. (91cm), 48 pol. (122cm), 60 pol. (152cm).

Nota: Tempo adicional será necessário para entrega de comprimentos de 48 pol. (122cm) e 60 pol. (152cm).

† Bocais maiores parecem ter aspersão em leque. Bocaix menores podem parecer ter iatos.

All components are protected by UV inhibitors and resist agricultural chemicals.

Todos los componentes estan protegidos por inhibidores de luz ultravioleta y resisten las sustancias químicas agricolas.

Todos os componentes deste microaspersor, possuem inibidores de UV (ultra violeta) e resistem aos quimicos utilizados na agricultura.

1 bar = approx. 100 kPa.

**GENERAL NOTE:** Performance data are obtained under ideal test conditions and may be adversely affected by wind, hydraulic conditions, and other factors.

\* Flow and diameter are based on pressure at the base of the Micro-Bird Spinner and a 6 in./15 cm riser height.

**NOTA:** Las datos de desempeño son obtenidos bajo condiciones ideales de prueba ser afectados adversamente por viento, condiciones hidráulicas y otros factores.

\* El caudal y el diámetro estan basados en la presión en la Micro-Bird II Spinner y 15 cm/6" dealtura.

**NOTA:** Dados de performance foram obtidos em condições ideais de teste e podem ser afetados por vento, condições hidráulicas, e outros fatores.

\* Dados de vasão foram baseados no pressão no base do microaspersor Micro-Bird II Spinner a 15 cm do solo.

## TECH SPECS

### Accessories

#### Air Vents, Software, Pressure Regulators, Pressure Gauges and Tools

##### Air Vents

**Superior protection against air blockage and vacuum collapse. Great value.**

The RB-2AV Air Vent / Vacuum Relief Valve has a large orifice to allow air to escape during pipeline filling and to reenter during pipeline draining. During pipeline filling, air must be allowed to escape to prevent blockages and surges, which can damage the pipe. And during pipeline draining, air must be allowed to reenter to prevent vacuum, which can cause the pipe to collapse. These valves do not release air from pipelines once the pipelines are under pressure.

The RB-2AV valves are typically installed at all high points along the line, near all pipe ends, downstream of any line shutoff valve, upstream of pump check valves, and every quarter of a mile on long pipelines.

Rain Bird Air Vent / Vacuum Relief valves are manufactured of cast aluminum (body), engineering grade plastic (float), and 300 series stainless steel (stem). RB-2AV valves are the ideal choice for all irrigation systems.

- Patented, aerodynamic float design
- Lightweight
- Pop-up stem indicator
- Economical
- 2 in NPT/ 50 mm inlet
- 1.75 in / 44,5 mm orifice
- Pressure Range: 2-150 psi / 0,1-10,3 bars

##### Air Vents

##### How to Order:

**RB - 2 - AV**

Product Line Identification

Inlet Size

##### Liquid-Filled Pressure Gauges

**Accurate, durable, and economical.**

RBG liquid-filled pressure gauges are accurate, durable, and economical. They are built to operate with irrigation and other agricultural systems and machines. The stainless steel case and glass lens are heavy duty and weather and chemical resistant. The glycerine fill is non-yellowing, prevents fogging, and dampens pulsations, and surges.

The RBG-L has a 2 1/2 in / 65 cm dial face and 1/4 in NPT connector.

- Glycerine-filled for long life
- High accuracy
- Rugged stainless steel case
- Glass lens
- Large numbers for easy reading
- Dual display (psi / bars)
- Easy to operate pressure release valve for greater accuracy

##### Liquid-Filled Pressure Gauges

##### How to Order:

**RBG - L - 30 - DC**

1 bar = approx. 100kPa

## "L" and "M" Pressure Regulators

### Accurate pressure regulation at an economical price.

PSI series regulators hold outlet pressure at a pre-set level. Regulated outlet pressures are available from 6 to 50 psi / 0,4 to 3,9 bars. As either inlet pressure or flow changes, the outlet pressure remains relatively constant. The charts illustrate the relationship between inlet and outlet pressure at different flows.

**"L" Series** are recommended for low flow conditions encountered in low volume irrigation systems.

Flow Range - 0.1-5 gpm /  
0,02-1,1 m<sup>3</sup>/hr/lps / 0.01-0.32

**"M" Series** are recommended for most operating conditions. This series is designed to withstand surges up to 100 psi / 6,8 bars greater than the rated outlet pressures, where high inlet pressures are combined with high flows.

Flow Range - 2-22 gpm /  
0,5-5,0 m<sup>3</sup>/hr/lps / 0.13-1.4

- Preset outlet pressure regulators
- 3/4 in / 20mm female inlet and outlet
- Choice of 8 outlet pressures
- Diaphragm operated
- Use in above and below ground applications
- Manufactured from rugged engineering-grade plastic
- Stainless steel spring

Pressure Range: 10-150 psi /  
0,7-10,3 bars

### Software

A sophisticated, yet easy to use selection of Rain Bird Agri-Products software assists the system designer in determining optimal irrigation solutions.

**PC-TAPE™ (L107)** is a unique program for analyzing Rain Tape pressure-compensating tape performance given field dimensions and slope information. Results are presented in graphical form illustrating pressure and emitter flow profiles along the lateral for uniform or non-uniform slopes.

**TREE-GRAM™ (L160)** provides graphical analysis of Micro-Quick™ patterns used in tree crops. Using the densogram output capabilities of the CIT SPACE® program, the software overlays tree canopies for any desired orchard or grove layout. Tree-Gram received the prestigious AE-50 Award from the American Society of Agricultural Engineers (ASAE).

**PC-DRIPTM (L195)** provides critical design assistance when using Rain Bird PC Dripline tubing. In addition, PC Drip received an AE-50 Award from the American Society of Agricultural Engineers (ASAE).

Rain Bird also offers universal bearing wrenches for both impact sprinklers and Rain Guns.

- **IMPACT BEARING WRENCH (IBW)** fits 1/2", 3/4", 1" and 1 1/4" male H bearings, and is manufactured from heavy-duty steel stock.
- **RAIN GUN BEARING WRENCH (GBW)** fits both 2" and 3" Rain Gun bearing lock nuts, and is machined from a solid piece of hardened steel.

These heavy-duty wrenches take time and effort out of your rebuilding projects, and since they are universal, you can be sure that you will always have the right tool for the job.

Please consult the Rain Bird Master Numerical Parts Book for a guide to a complete selection of Genuine Rain Bird parts and tools.
